FT-100X TECHNICAL SUPPLEMENT

This manual is intended to serve as a supplement to the FT-100X Operating Manual. Described information regarding functions, installation, interconnections and operation has been provided in the Operating Manual, and is not repeated herein. Therefore, this supplement is not intended to serve as an independent reference, but is to be used in conjunction with the information provided in the Operating Manual.

Because there are nearly two hundred and fifty semiconductor devices in the FT-100X, circuit description information is provided in the form of numerous block diagrams. We hope that this manner of providing functional information proves to be more convenient for the owner and technician than would a lengthy verbal description. Those readers unfamiliar with the basic types of analog and digital circuits that serve as the building blocks of the FT-100X are encouraged to study instructional material, such as that provided in handbooks on amateur radio and digital circuit design, before attempting to understand the design of the FT-100X. Each block in the block diagrams represents one such basic circuit. General information on integrated circuits and their applications is available in the data provided by the IC manufacturers. Specific circuit details are provided in the schematic diagrams in this manual.

While we believe the technical information in this manual is correct, YAESU assumes no liability for damage that may occur as a result of typographical or other errors that may be present. Your cooperation in pointing out any inconsistencies in the technical information would be appreciated.

YAESU reserves the right to make changes in the circuitry of this transmitter, in the interest of technological improvement, without obligation to notify owners or to modify any sets produced prior to the modification.
