Upstream Or Downstream Issues In Environmental Ethics:

Upstream/downstream Donald Scherer, 1990 Contains essays that explore non reciprocated relationships with regard to the environment This work includes contributions that discuss moral issues that arise when decisions by individuals corporations or governments cause changes in the environment that affect those who do not participate in the decisions

Canadian Issues in Environmental Ethics Wesley Cragg, Allan Greenbaum, Alex Wellington, 1997-06-10 Is it possible to design a forest policy that satisfies ethical and environmental concerns and is acceptable to business labour and First Nations representatives What is the best path through the tangle of ethical issues surrounding the collapse of the east coast fishery What sort of obligations does a rich nation such as Canada have to satisfy the claims of global environmental justice These are the sorts of issues in applied ethics that are tackled in this collection of essays the vast majority of which have been written especially for this volume It is the first Canadian collection of its kind The book is divided in to sections detailing with such topics as the environment and the economy ethical issues relating to non human animals issues of gender and issues relating to native peoples Most of the authors are philosophers though specialists in geography geology and the social sciences are also among the contributors Frequent reference is made to theoretical ethical concerns but the focus throughout is on applied ethics and a variety of case studies are included Examples include essays on animal rights and the case of native hunters surface mining in Northern Ontario the Quebec arctic and fishing communities in the Maritimes Comparisons are frequently drawn to policies and ethical questions arising in other countries most prominently the United States

Postmodern Environmental Ethics Max Oelschlaeger, 1995-08-17 This book explains the role of language in causing and in resolving the ecocrisis showing that ecologically adaptive behavior can be facilitated through language The authors explore the discourses of deep ecology ecofeminism Judeo Christianity quantum theory and Native American world views all to the end of empowering ecosocial change

Environmental Ethics and the Global Marketplace Dorinda G. Dallmeyer, Albert F. Ike, 1998 The global market is the largest and most powerful socioeconomic institution on the planet and as such it demands that those who desire to benefit from it or those who seek to regulate it realize the economic and environmental consequences of their actions The contributors to *Environmental Ethics and the Global Marketplace* argue that the health of the environment is inextricably linked to the health of the economy and economic strength depends on the preservation of environmental values Ultimately economic and environmental sciences must merge more completely if we are to arrive at ethically justified principles as the basis for national and international environmental policy process enabling environmental ethics to move beyond academic venues into domestic and international decision making

Environmental Ethics and Forestry Peter C. List, 2000 During the past twenty five years North American forestry has received increasingly vigorous scrutiny Critics including the environmentalists environmental scientists representatives of public interest groups and many individual citizens have expressed concerns about forestry s basic assumptions and methods as well as its practical

outcomes Criticism has centered on such issues as the exploitation of forests for timber production the reduction and fragmentation of old growth habitats the destruction of biodiversity the degradation of grasslands through grazing practices lack of government attention to recreation facilities silvicultural methods like clearcutting and the use of herbicides and pesticides the exportation of industrial forestry techniques to other parts of the world and the use of public monies to provide services for private resource companies as in the creation of logging roads This rising tide of public scrutiny has led many foresters to suspect that their contract with society to manage forests using their best professional judgment had been undermined Some of these professionals as well as some of their critics have begun to reexamine their old beliefs and to look for new ways of practicing forestry Part of this reflective process has entailed new directions in environmental ethics and environmental philosophy This reader brings together some of the new thinking in this area Here students of the applied environmental and natural resource sciences as well as the interested general reader will discover a rich sampling of writings in environmental ethics and philosophy as they apply to forestry Readings focus on basic ethical systems in forestry and forest management philosophical issues in forestry ethics codes of ethics in forestry and related natural resource sciences such as fisheries science and wildlife biology Aldo Leopold's land ethic in forestry ethical advocacy and whistleblowing in government resource agencies the ethics of new forestry ecoforestry and public debate in forestry as well as ethical issues in global forestry such as the responsibilities of forest corporations environmentalists and individual wood consumers This volume contains materials from the founders of forestry ethics such as Bernhard Fernow Gifford Pinchot John Muir and Aldo Leopold from such organizations as the Society of American Foresters the Wildlife Society the American Fisheries Society Forest Service Employees for Environmental Ethics and the Ecoforesters group in addition to writings by a variety of well known environmental philosophers and foresters including Holmes Rolston Robin Attfield Lawrence Johnson Michael McDonald Paul Wood James E Coufal Raymond Craig Kristin Shrader Frechette Jeff DeBonis Jim L Bowyer Alasdair Gunn Goug Gaigle Alan G McQuillan Stephanie Kaza Alan Dregson Duncan Taylor and Kathleen Dean Moore Author note Peter C List is Professor of Philosophy at Oregon State University where he teaches courses on environmental ethics ethical issues in the natural resource sciences and sustainable forestry He is the author of articles on Aldo Leopold's land ethic and co author of several articles on public attitudes about federal forests and forest management published in the Journal of Forestry and Society and Natural Resources Applied Ethics in a Troubled World Edgar Morscher, Otto Neumaier, Peter M. Simons, Peter Simons, 1998-03-31 The 23 papers that were prepared for a 1991 symposium that was cancelled beneath the weight of public and professional protests at some of the speakers invited particularly Peter Singer They analyze the application of theoretical considerations arising from philosophical reflection to particular concrete cases and situations of moral conflict in such fields as the environment biology and medicine business and professions politics law and society Among the topics are a philosophical critique of legal rights for natural objects comparing the value of human and nonhuman

life business ethics as a goal rights system liberal society and planned morality and moral philosophy and its function No subject index Annotation copyrighted by Book News Inc Portland OR **Environmental Ethics** Robert Elliot, 1995 This latest addition to the acclaimed Oxford Readings in Philosophy series offers a selection of some of the best articles on ethics and the environment written in the last twenty years Focusing on the philosophical issues underlying this key topic the contributions cover duties to future people resource conservation species and wilderness preservation the relevance of ecology to ethics ecofeminism and the tension between political liberalism and environmentalism Including writings by Baird Callicot Colleen D Clements Mary Midgley John Passmore Holmes Rolston III Mark Sagoff Elliott Sober Mary B Williams Andrew Brennan Freya Matthews Val Plumwood and Richard Routley this accessible and timely book makes a perfect introduction to the main debates in this area Biodiversity and Democracy Paul Malcolm Wood, 2000 This work argues that the problem of extinction can be traced to how we think about biodiversity and democratic societies While biodiversity is usually confused with biological resources Wood argues that it should be conceived as an essential environmental condition

Climate Change and Liberal Priorities Gideon Calder, Catriona McKinnon, 2013-09-13 Can and should liberalism make itself hospitable to a politics which does justice to climate change To what extent are the values methods and assumptions of liberalism adaptable to the challenges raised Liberal thinking broadly construed may dominate the Academy and the political landscape Are the environmental priorities that are thrown into relief by climate change a threat to it or are they an opportunity for it to show its worth This book explores fresh arguments by leading scholars both of whom are sceptical of liberalism's capacity to meet these challenges and sympathetic to the project of developing liberal values so as to create a liberal approach that can deliver climate change justice The chapters appeal to new insights and considerations reveal the complexity of the issues at stake in the real world of climate change politics They make the political theory of climate change justice available to decision makers whose practice will determine whether we achieve it This book was previously published as a special issue of Critical Review of International Social and Political Economy Preparing for an Uncertain Climate

, 1993 **A Theory of Intergenerational Justice** Joerg Chet Tremmel, 2009-12-01 The appeal to our obligations to future generations is one of the most forceful emotional and effective arguments available to politicians and citizens and is the cornerstone of all modern policies aimed at sustainable development Yet the exact nature and extent of these obligations are unclear who owes what to whom exactly and why This highly accessible book provides an extensive and comprehensive overview of current research and theory about why and how we should protect future generations It exposes how and why the interests of people today and those of future generations are often in conflict and what can be done It rebuts critical concepts such as Parfit's non identity paradox and Beckerman's denial of any possibility of intergenerational justice The core of the book is the lucid application of a veil of ignorance to derive principles of intergenerational justice which show that our duties to posterity are stronger than is often supposed Tremmel's approach demands that each generation both consider and

improve the well being of future generations To measure the well being of future generations Tremmel employs the Human Development Index rather than the metrics of utilitarian subjective happiness The book thus answers in detailed concrete terms the two most important questions of every theory of intergenerational justice what to sustain and how much to sustain Ultimately this book provides a theory of intergenerational justice that is both intellectually robust and practical with wide applicability to law policy economics climate change and all other contexts that affect future generations **Environmental Activism and World Civic Politics** Paul Kevin Wapner,1996-01-01 Based on case studies of three transnational groups it argues that in addition to lobbying governments activists operate within and across societies to effect widespread change They work through transnational social economic and cultural networks to alter corporate practices educate vast numbers of people pressure multilateral development banks and shift standards of good conduct Wapner argues that because this activity takes place outside the formal arena of inter state politics environmental activists practice world civic politics they politicize global civil society **Handbook of the Philosophy of Climate Change** Gianfranco Pellegrino,Marcello Di Paola,2023-11-24 This Handbook offers a broad yet unified treatment of many philosophical issues connected with climate change ranging from foundational puzzles to detailed applications It extends to many branches of philosophy that are relevant to the understanding of the premises and implications of the impacts of climate change on human and nonhuman life on Earth More specifically the handbook examines the scientific accounts of climate change as well as its causes It explores the tools offered by social sciences and humanities to study the societal premises and impacts of climate change as well as delving deeper into the ethical and political issues connected with and resulting from climate change By doing so it puts it all in an ecological and historical context In addition the book offers solutions to some important philosophical puzzles and problems and indicates paths of interaction between philosophy and other disciplines The discussion about climate change and the mitigation adaptation policies spans many areas and levels from abstract science and philosophy to current on the ground politics However climate change is also a great philosophical puzzle Indeed its existential and practical relevance can be thought to largely derive from the philosophical complications it engenders Climate change is applied philosophy par excellence Preventing dangerous anthropogenic climate change needs very good philosophy applied to concrete and specific practical issues Climate change is an area where scholars from very different provenances should cooperate on equal terms having in view a common and really important purpose contribute to preventing great burdens and even the extinction of humankind and the destruction of hospitable and valuable non human nature *Climate Change, Justice and Future Generations* Edward A. Page,2007-01-01 Climate Change Justice and Future Generations is a valuable contribution to the debate on both theoretical and applied justice in climate change and it fills a manifest gap in the current literature Marco Grasso International Environmental Agreements Page effectively marries the issues raised by climate change science with analytical philosophy to provide a perspective on why or why not measures should be taken to reduce climate change and the

risks harm it poses for future generations a valuable book for politicians and policy makers who seek to change the world and manage its climate Antoinette M Mannion Electronic Green Journal We are badly in need of ways of understanding global problems that go beyond the current economic paradigms Climate Change Justice and Future Generations helps us with this task by effectively linking climate change with some important mainstream work on political justice It should be a very useful book not just for the classroom and the academy but also for the realm of policy Stephen Gardiner University of Washington US The book begins with a detailed account of the science of climate change that is user friendly for non scientists without sacrificing depth Page s analysis is impressive in both its scope and execution and has a relevance and potential appeal in a number of fields Kerri Woods Political Studies Review Climate Change Justice and Future Generations is an authoritative analytical and extremely scholarly integration of scientific and technical information empirical data and modelling concerning global climate change and high level normative analysis Page convincingly and patiently lays out the argument including the ways in which climate change challenges settled modes of ethical thought despite it being one of the most if not the important ethical issues of the age As a book on both theoretical and applied ethics it makes an important contribution to the field John Barry Queen s University Belfast UK What the climate change policy called Contraction and Convergence has lacked until now is an authoritative theoretical grounding Here Ed Page puts this right In masterful fashion he dissects the issues at stake in designing climate change policy and leaves his readers in no doubt that there is a fair and effective alternative to rising tides This is a book for students researchers and for anyone with the feeling that business as usual is no longer an option Andrew Dobson University of Keele UK Global climate change raises important questions of international and intergenerational justice In this important new book the author places research on the origins and impacts of climate change within the broader context of distributive justice and sustainable development He argues that a range of theories of distribution notably those grounded in ideals of equality priority and sufficiency converge on the adoption of the ambitious global climate policy framework known as Contraction and Convergence Climate Change Justice and Future Generations will be of great interest to academics and students specialising in environmental ethics politics and environmental sustainability It will also be of general interest to those concerned with climate change and the environment **Contingent Future**

Persons N. Fotion, J.C. Heller, 1997-08-31 This volume is concerned with how we ought to evaluate the individual and collective actions on which the existence numbers and identities of future people depend discussed here as the problem of contingent future persons For it seems that those future persons who are brought into existence by such actions cannot benefit from or be harmed by them in any conventional sense This is a relatively novel problem in ethics and as yet there is simply no consensus on how we ought to evaluate such actions or indeed on whether we can However the pursuit of a solution to the problem has been interestingly employed by moral philosophers to press the limits of ethics and to urge a reconsideration of the nature and source of value at its most fundamental level Intended for professional ethicists policy

researchers and graduate students this volume explores the theological implications of the problem and advances the investigation of it both philosophical and in theological terms Book Jacket *Gewirth* Michael Boylan,1999 As one of the most important ethicists to emerge since the Second World War Alan Gewirth continues to influence philosophical debates concerning morality In this ground breaking book Gewirth s neo Kantianism and the communitarian problems discussed form a dialogue on the foundation of moral theory Themes of agent centered constraints the formal structure of theories and the relationship between freedom and duty are examined along with such new perspectives as feminism the Stoics and Sartre Gewirth offers a picture of the philosopher s theory and its applications providing a richer more complete critical assesment than any which has occurred to date **Giving Future Generations a Voice** Linehan, Jan, Lawrence, Peter,2021-08-27 This important book focuses on how newly emerging institutions for future generations can contribute to tackling large scale global environmental problems such as threats to biodiversity and climate change It is especially timely given the new global impetus for decarbonisation as well as the huge growth of climate litigation and climate protest movements often led by young people Nature of Science for Social Justice Hagop A. Yacoubian, Lena Hansson,2020-09-08 This edited volume brings closer two contemporary science education research areas Nature of Science NOS and Social Justice SJ It starts a dialogue on the characteristics of NOS for SJ with the purpose of advancing the existing discussion and creating new avenues for research Using a variety of approaches and perspectives the authors of the different chapters engage in a dialogue on the construct of NOS for SJ its characteristics as well as ways of addressing it in science classrooms Issues addressed are related to why a school science aiming at SJ should address NOS what NOS related content skills and attitudes form the basis when aiming at SJ and how school science can address NOS for SJ Through a set of theoretical and empirical chapters the authors suggest answers but they also pose new questions on what NOS for SJ can mean and what issues need to be taken into consideration in future research and practice Chapter Nature of Science for Social Justice Why What and How is available open access under a Creative Commons Attribution 4 0 International License via link [springer.com](https://www.springer.com) *Recent Library Additions* ,1992 **Ethical Values and the Integrity of the Climate Change Regime** Hugh Breakey, Vesselin Popovski,2016-05-23 This book investigates the ethical values that inform the global carbon integrity system and reflects on alternative norms that could or should do so The global carbon integrity system comprises the emerging international architecture being built to respond to the climate change This architecture can be understood as an integrity system an inter related set of institutions governance arrangements regulations and practices that work to ensure the system performs its role faithfully and effectively This volume investigates the ways ethical values impact on where and how the integrity system works where it fails and how it can be improved With a wide array of perspectives across many disciplines including ethicists philosophers lawyers governance experts and political theorists the chapters seek to explore the positive values driving the global climate change processes to offer an understanding of the motivations justifying the

creation of the regime and the way that social norms impact upon the operation of the integrity system The collection focuses on the nexus between ideal ethics and real world implementation through institutions and laws The book will be of interest to policy makers climate change experts carbon taxation regulators academics legal practitioners and researchers
