Unit 3 – Making a Living

- 1 a) A. cleaner E teacher
B. florist F barber
C. cameraman G vet
D. decorator

b) (Suggested Answer Key)

- The cameraman would probably be paid well if the film he was working on was predicted to be a box office success.
- I would find the teacher's job more challenging than the others because you need a lot of patience to teach. I can also imagine the satisfaction you might get when you realise that your pupils finally understand the difficult aspects of the lesson.
- The vet's job would be extremely interesting for me as I've always loved animals and am especially interested in all aspects of wildlife.
- The decorator's job would be too repetitive for me. Imagine doing the same thing day in, day out! It must be very tiring too, looking up and down at ceilings and walls for hours on end!
- The most boring job would probably be the barber's job. The only thing that might reduce the boredom would be chatting with customers.

- c) A: I would certainly consider being a florist, as I love the idea of working with beautiful colours and shapes to create unusual designs.
B: I'm not so sure. I'm not really an arty sort of person, you see.

A: I would certainly not consider being a cleaner, simply because I have enough to do cleaning my own house never mind cleaning other houses!

B: I agree. It's very hard work.

A Theory of Supply Chains Carlos F. Daganzo, 2012-12-06 This work was stimulated by a comment made by a former student Prof Alan Erera of Georgia Tech in connection with an inventory stability game he was going to play in one of his logistics classes This was the well known beer game that is often played in business schools to illustrate the bullwhip effect in supply chains Al had said to me that he did not have to tell his students how to reorder replacement parts from the other members of the supply chain because he knew from experience that the order sizes the players would generate as the game progressed would become chaotic anyhow Since I had not played the beer game his assertion was intriguing to me Why would such an unstructured game always lead to the same undesirable effect Did it have something to do with psychology What is it that players did to generate instabilities I posed these to other people but could not get completely satisfactory answers Thus the bullwhip mystery remained at least in my mind Since inventory chains are conservative systems analogous to a traffic stream and since traffic flow models exhibit similar effects the instability of automobile platoons and of certain numerical methods being two notable examples I suspected that traffic flow theory might shed some light on the puzzle

Molecular Gas Dynamics Yoshio Sone, 2007-10-16 Molecular Gas Dynamics originates from lectures and seminars delivered by the author at various universities and institutions worldwide These materials are supplemented and arranged in a form appropriate to a graduate textbook on molecular gas dynamics or gas dynamics on the basis of kinetic theory The book provides an up to date description of the basic theory of molecular gas dynamics and its various applications giving interesting and important gas dynamic phenomena The progress of molecular gas dynamics in the last forty years has greatly enhanced the contents of the basic theory and provided information on various interesting and important gas dynamic problems This has made it possible to compile a new graduate textbook on molecular gas dynamics The present book reflects these developments providing working knowledge theory techniques and typical phenomena in rare edge low density and crowns for future theoretical development and applications The book begins with a brief presentation of the fundamental properties of the Boltzmann equation and a summary of notation used globally in subsequent chapters of the book A full explanation of the fundamental properties is
