Euclidean Geometry in Mathematical Olympiads Evan Chen, 2016-05-02 This is a challenging problem solving book in Euclidean geometry assuming nothing of the reader other than a good deal of courage Topics covered included cyclic quadrilaterals power of a point homothety triangle centers along the way the reader will meet such classical gems as the nine point circle the Simson line the symmedian and the mixtilinear incircle as well as the theorems of Euler Ceva Menelaus and Pascal Another part is dedicated to the use of complex numbers and barycentric coordinates granting the reader both a traditional and computational viewpoint of the material The final part consists of some more advanced topics such as inversion in the plane the cross ratio and projective transformations and the theory of the complete quadrilateral The exposition is friendly and relaxed and accompanied by over 300 beautifully drawn figures The emphasis of this book is placed squarely on the problems Each chapter contains carefully chosen worked examples which explain not only the solutions to the problems but also describe in close detail how one would invent the solution to begin with The text contains a selection of 300 practice problems of varying difficulty from contests around the world with extensive hints and selected solutions This book is especially suitable for students preparing for national or international mathematical olympiads or for teachers looking for a text for an honor class

Aha! Solutions Martin J. Erickson, 2009-01-22 Every mathematician beginner amateur and professional alike thrills to find simple elegant solutions to seemingly difficult problems Such happy resolutions are called aha solutions a phrase popularized by mathematics and science writer Martin Gardner Aha solutions are surprising stunning and scintillating they reveal the beauty of mathematics This book is a collection of problems with aha solutions The problems are at the level of the college mathematics student but there should be something of interest for the high school student the teacher of mathematics the math fan and anyone else who loves mathematical challenges This collection includes one hundred problems in the areas of arithmetic geometry algebra calculus probability number theory and combinatorics The problems start out easy and generally get more difficult as you progress through the book A few solutions require the use of a computer An important feature of the book is the bonus discussion of related mathematics that follows the solution of each problem This material is there to entertain and inform you or point you to new questions If you don't remember a mathematical definition or concept there is a Toolkit in the back of the book that will help

USA and International Mathematical Olympiads, 2002 Titu Andreescu, Zuming Feng, 2003 This is the third volume of problems that cover the USA Mathematical Olympiad USAMO and the International Mathematical Olympiad IMO to be published by the MAA in its Problem Book series The aims of the IMO are to discover encourage and challenge mathematically gifted young people in all countries to foster friendships between mathematicians around the world and to create an opportunity for the exchange of information on school syllabi and practice throughout the world The USAMO and the Team Selection Test TST are the last two stages of the selection process leading to representing the USA in the IMO The preceding examinations are the AMC 10

or AMC 12 and the American Invitational Mathematics Examination AIME Participation in the AIME USAMO and the TST is by invitation only based on performance in the preceding exams of the sequence All of these contests identify and recognize young gifted mathematicians while they are still in secondary school Participation in these competitions provides them with the chance to measure themselves against other exceptional students from all over the world

A Path to Combinatorics for Undergraduates Titu Andreescu, Zuming Feng, 2013-12-01 The main goal of the two authors is to help undergraduate students understand the concepts and ideas of combinatorics an important realm of mathematics and to enable them to ultimately achieve excellence in this field This goal is accomplished by familiarizing students with typical examples illustrating central mathematical facts and by challenging students with a number of carefully selected problems It is essential that the student works through the exercises in order to build a bridge between ordinary high school permutation and combination exercises and more sophisticated intricate and abstract concepts and problems in undergraduate combinatorics The extensive discussions of the solutions are a key part of the learning process The concepts are not stacked at the beginning of each section in a blue box as in many undergraduate textbooks Instead the key mathematical ideas are carefully worked into organized challenging and instructive examples The authors are proud of their strength their collection of beautiful problems which they have accumulated through years of work preparing students for the International Mathematics Olympiads and other competitions A good foundation in combinatorics is provided in the first six chapters of this book While most of the problems in the first six chapters are real counting problems it is in chapters seven and eight where readers are introduced to essay type proofs This is the place to develop significant problem solving experience and to learn when and how to use available skills to complete the proofs

Number Theory Titu Andreescu, Dorin Andrica, 2009-06-12 This introductory textbook takes a problem solving approach to number theory situating each concept within the framework of an example or a problem for solving Starting with the essentials the text covers divisibility unique factorization modular arithmetic and the Chinese Remainder Theorem Diophantine equations binomial coefficients Fermat and Mersenne primes and other special numbers and special sequences Included are sections on mathematical induction and the pigeonhole principle as well as a discussion of other number systems By emphasizing examples and applications the authors motivate and engage readers

The Alberta High School Math Competitions 1957-2006 Andrew Chiang-Fung Liu, 2008 Presents the problems and answers for the first 50 years of the Alberta High School Mathematics Competition up to 2005 2006 Full solutions are provided to those from the Modern period often supplemented with multiple solutions or additional commentaries

First Steps for Math Olympians: Using the American Mathematics Competitions J. Douglas Faires, 2020-10-26 Any high school student preparing for the American Mathematics Competitions should get their hands on a copy of this book A major aspect of mathematical training and its benefit to society is the ability to use logic to solve problems The American Mathematics Competitions AMC have been given for more than fifty years to millions of high school

students This book considers the basic ideas behind the solutions to the majority of these problems and presents examples and exercises from past exams to illustrate the concepts Anyone taking the AMC exams or helping students prepare for them will find many useful ideas here But people generally interested in logical problem solving should also find the problems and their solutions interesting This book will promote interest in mathematics by providing students with the tools to attack problems that occur on mathematical problem solving exams and specifically to level the playing field for those who do not have access to the enrichment programs that are common at the top academic high schools The book can be used either for self study or to give people who want to help students prepare for mathematics exams easy access to topic oriented material and samples of problems based on that material This is useful for teachers who want to hold special sessions for students but it is equally valuable for parents who have children with mathematical interest and ability As students problem solving abilities improve they will be able to comprehend more difficult concepts requiring greater mathematical ingenuity They will be taking their first steps towards becoming math Olympians

Hungarian Problem Book IV Robert Barrington

Leigh,Chiang-Fung Andrew Liu,2011 Forty eight challenging problems from the oldest high school mathematics competition in the world This book is a continuation of Hungarian Problem Book III and takes the contest from 1944 through to 1963 This book is intended for beginners although the experienced student will find much here

The Contest Problem Book VIII J.

Douglas Faires,Dave Wells,2008 For more than 50 years the Mathematical Association of America has been engaged in the construction and administration of challenging contests for students in American and Canadian high schools The problems on these contests are constructed in the hope that all high school students interested in mathematics will have the opportunity to participate in the contests and will find the experience mathematically enriching These contests are intended for students at all levels from the average student at a typical school who enjoys mathematics to the very best students at the most special school In the year 2000 the Mathematical Association of America initiated the American Mathematics Competitions 10 AMC 10 for students up to grade 10 The Contest Problem Book VIII is the first collection of problems from that competition covering the years 2001 2007 J Douglas Faires and David Wells were the joint directors of the AMC 10 and AMC 12 during that period and have assembled this book of problems and solutions There are 350 problems from the first 14 contests included in this collection A Problem Index at the back of the book classifies the problems into the following major subject areas Algebra and Arithmetic Sequences and Series Triangle Geometry Circle Geometry Quadrilateral Geometry Polygon Geometry Counting Coordinate Geometry Solid Geometry Discrete Probability Statistics Number Theory and Logic The major subject areas are then broken down into subcategories for ease of reference The Problems are cross referenced when they represent several subject areas
