US Climate Change Policy Transforming Environmental Politics And Policy:

US Climate Change Policy Christopher J. Bailey, 2016-02-11 The United States is often perceived as sceptical if not hostile to the need to address man made climate change US government policy has undoubtedly disappointed environmentalists and scientists who believe more concerted action is needed but a careful examination of the evidence reveals a number of policy actions designed to investigate mitigate and adapt to climate change have been implemented Laws regulatory action and court rulings have led to advances in climate science action to reduce levels of greenhouse gas emissions and efforts to prepare for the potential consequences of climate change In this important book Chris Bailey explains and details the challenges and achievements of US climate change policy from its origins to the present day **The Politics of Human Vulnerability to Climate Change** Julia Teebken, 2022-03-30 This book compares how the social consequences of climate change are similarly unevenly distributed within China and the United States despite different political systems Focusing on the cases of Atlanta USA and Jinhua China Julia Teebken explores a set of path dependent factors lock ins which hamper the pursuit of climate adaptation by local governments to adequately address the root causes of vulnerability Lock ins help to explain why adaptation efforts in both locations are incremental and commonly focus on greening the environment In both these political systems vulnerability appears as a core component along with the reconstitution of a class based society This manifests in the way knowledge and political institutions operate For this reason Teebken challenges the argument that China s environmental authoritarian structures are better equipped in dealing with matters related to climate change She also interrogates the proposition that certain aspects of the liberal democratic tradition of the United States are better suited in dealing with social justice issues in the context of adaptation Overall the book s findings contradict the widespread assumption that developed countries necessarily have higher adaptive capacity than developing or emerging economies This volume will be of great interest to students and scholars of climate justice and vulnerability climate adaptation and environmental policy and governance *Framing Climate Change in the EU and US After the Paris Agreement* Frank Wendler, 2022-07-01 Political responses to climate change are shaped by beliefs and ideas How does discourse on climate action and its contestation affect policy making Addressing this question the book compares EU and US policy making since the Paris Agreement and its framing by key political institutions The empirical part analyses the structure linkages and contestation of frames to evaluate the contrasting spaces of climate politics in both systems As the first direct comparison of EU and US climate governance since the Paris Agreement the book advances current research on the politics of climate change the politicization of multi level governance and the role of discourse for policy change **The Evolution of Carbon Markets** Jørgen Wettestad, Lars Gulbrandsen, 2017-12-14 Carbon markets are developing and expanding around the world but how and to what extent is their design shaped by learning and interaction between them How do these markets function and what is the role of design Carrying out a ground breaking analysis of their design and

diffusion this book covers all the major carbon market systems and processes around the world the EU RGGI California Tokyo New Zealand Australia China South Korea and Kazakhstan It offers a systematic in depth discussion and comparison of the key design features in these systems with expert contributors exploring how and to what extent these features have been shaped by central policy diffusion mechanisms and domestic politics By focussing on the specific design features of the instruments used this volume makes important contributions to diffusion theory highlighting how ETS diffusion processes more often have resulted in design divergence than convergence and discussing the implications of this finding for the vision of linked systems in the post Paris era It will be of significant interest to a broad audience interested in the emergence evolution functioning and interaction of carbon markets
