Approaches to Chronic Pain Peter Wemyss-Gorman, 2020-12-21 This book sets out to restore the concept of healing to its place within and beyond pain medicine in chapters authored by keynote speakers to the British Pain Society's Philosophy and Ethics Special Interest Group Exploring psychological spiritual and creative approaches contributors reflect on therapeutic avenues ranging from the deliberate use of the placebo response and the importance of a caring relationship between patient and practitioner to the use of knitting as a therapeutic tool Barriers to the flow of healing such as practitioners' careless use of language and cultural attitudes are identified and contrasted with the need to understand the first person perspectives of people who are suffering This book will provide hope and inspiration both to people who have become disillusioned with conventional medical approaches to the relief of their pain and to health professionals sadly aware of the frequent inadequacy of their efforts to help them

Secrets for a Good Life Dr. Jack Elliott, 2011-09-12 The purpose of this book is to give you ideas that can help make your life better They are thoughts that can bring clarity and even add some fun to life The secrets are meant to empower you to build a good life even to find a little more peace and happiness along the way They can help get you through some of the storms and dark valleys we all experience Each secret is in a bold print one sentence statement that can easily be remembered To better grasp the secret there is a story or two brief explanation and a few questions to get you going Pick up a secret and use it in whatever way you want They are tools for your own life to use the way you think feel live and act Apply these secrets using your own values morals faith and relationships They are not formulas to follow but tools to help you find and live your own good life This started out as a humorous book to entertain and enlighten Perhaps a few secrets might stick a needle in that one could not quite get out that is might just get through the

epidermis of prejudice absoluteness or blindness of many kinds of which we all have a little What happened along the way is that serious secrets showed up that could not be dressed in humor but seemed important to include There are different kinds of secrets in this book and I won't define secrets any more than stating that a secret is something that provides some insight for the journey of life Some are so obvious that we wonder how we ever missed them or realize that we have heard them but went right on by and didn't stop to take them to heart or to mind Still others are counter intuitive and so we have to stop and read them again and perhaps turn our thinking to a new direction After you read awhile you will notice some redundancy Similar secrets are found in different sections

Discourses of Religion and Secularism in Religious Education Classrooms Karin Kittelmann Flensner, 2017-07-07

This book answers the question on how students and teachers talk about religion when the mandatory and nonconfessional school subject of Religious Education is on the schedule in the world's most secular country To do this it analyses discourses of religion as they occur in the classroom practice It is based on findings from participant observation of Religious Education lessons in several upper secondary schools in Sweden The book discusses different aspects of the role and function of nonconfessional integrative Religious Education in an increasingly pluralistic multireligious yet also secularized society at a general level It looks at the religious landscape different perspectives on school subjects various models and the development of Religious Education and discourses of religion of a secularist spiritual and nationalistic nature Religious Education is a school subject that manoeuvres in the midst of a field that on the one hand concerns crucial knowledge in a pluralistic society and on the other hand deals with highly contested questions in a society characterized by diversity and secularity In the mandatory integrative and non confessional school subject of Religious Education in Sweden all students are taught together

regardless of religious or secular affiliation The subject deals with major world religions important non religious worldviews and ethics from a non confessional perspective Thus in the classroom individuals who identify with diverse religious and non religious worldviews with a different understanding of what religion could be and what it might mean to be religious are brought together The book examines questions raised in this pluralistic context What discourses of religion become hegemonic in the classroom How do these discourses affect the possibility of reaching the aim of Religious Education which concerns understanding and respect for different ways of thinking and living in a society characterized by diversity

Towards Revealing the Origin of Life Kenji Ikehara, 2021-06-07 The origin of life has been investigated by many researchers from various research fields such as Geology Geochemistry Physics Chemistry Molecular Biology Astronomy and so on Nevertheless the origin of life remains unsolved One of the reasons for this could be attributed to the different approaches that researchers have used to understand the events that happened on the primitive Earth The origins of the main three members of the fundamental life system as gene genetic code and protein could be only separately understood with these approaches Therefore it is necessary to understand the origins of gene the genetic code tRNA metabolism cell structure and protein not separately but comprehensively under a common concept in order to understand the origin of life because the six members are intimately related to each other In this monograph the author offers a comprehensive hypothesis to explain the origin of life under a common concept At the same time the author offers the GADV hypothesis contrasting it with other current hypotheses and discusses the results of analyses of genes proteins and the experimental data available in the exploration of the current knowledge in the field This book is of interest for science students researchers and the general public interested in the origin of life
