John Westfall, William Sheehan

Transit Of Venus 1631 To The Present:

Transit of Venus Nick Lomb, 2012-04-03 Traces the impact on astronomy and science of the six times that the planet Venus has passed in front of the Sun since the discovery of the telescope in the seventeenth century and discusses the 2012 transit the last in this century

Venus William Sheehan, Sanjay Shridhar Limaye, 2022-08-04 From the latest scientific advances to observation advice for amateur astronomers a beautifully illustrated exploration of one of Earth's closest neighbors This book is a new beautifully illustrated account of Venus taking in the most recent research into this mysterious inhospitable world The book looks at the history of our observations of the planet from early astronomy to future space missions and seeks to shed light on many of the questions that remain unanswered such as why Venus and the Earth so similar in size and mass evolved in such different directions and how Venus acquired its dense carbon dioxide atmosphere Above all Venus assesses whether life might have escaped from the oven like temperatures at the surface and evolved to become perpetually airborne in which case Venus may not be lifeless after all

Eclipses, Transits, and Comets of the Nineteenth Century Stella Cottam, Wayne Orchiston, 2014-09-16 Winner of the AAS 2019 Donald E Osterbrock Book Prize for Historical Astronomy Grabbing the attention of poets politicians and the general public alike a series of spectacular astronomical events in the late 1800s galvanized Americans to take a greater interest in astronomy than ever before At a time when the sciences were not yet as well established in the United States as they were in Europe this public interest and support provided the growing scientific community in the United States with the platform they needed to advance the field of astronomy in the United States Earlier in the 19th century comets meteors and the discovery of the planet Neptune were all sources of inspiration to the general public The specific events to be considered here are the total solar eclipses of 1868 1869 and 1878 and the transits of Venus of 1874 and 1882 The available media responded to public interest as well as generating more interest These events laid the groundwork that led to today's thriving network of American amateur astronomers and provide a fascinating look at earlier conceptions of the stars

The Cosmos Jay M. Pasachoff, Alex Filippenko, 2014 An exciting introduction to astronomy using recent discoveries and stunning photography to inspire non science majors about the Universe and science

Celestial Shadows John Westfall, William Sheehan, 2014-11-19 Much of what is known about the universe came from the study of celestial shadows This book looks in detail at the way eclipses and other celestial shadows have given us amazing insights into the nature of the objects in our solar system and how they are even helping us discover and analyze planets that orbit stars other than our Sun A variety of eclipses transits and occultations of the moons of Jupiter and Saturn Pluto and its satellite Charon asteroids and stars have helped astronomers to work out their dimensions structures and shapes even the existence of atmospheres and structures of exoplanets Long before Columbus set out to reach the Far East by sailing West the curved shadow of the Earth on the Moon during a lunar eclipse revealed that we inhabit a round world a globe More recently comparisons of the sunlit and Earthlit parts of the Moon have been used to determine

changes in the Earth's brightness as a way of monitoring possible effects in cloud coverage which may be related to global warming. Shadows were used by the Greek mathematician Eratosthenes to work out the first estimate of the circumference of the Earth by Galileo to measure the heights of the lunar mountains and by eighteenth century astronomers to determine the scale of the Solar System itself. Some of the rarest and most wonderful shadows of all are those cast onto Earth by the lovely Evening Star Venus as it goes between the Earth and the Sun. These majestic transits of Venus occur at most two in a century. After the 2012 transit there is not a chance to observe this phenomenon until 2117 while the more common sweep of a total solar eclipse creates one of the most dramatic and awe inspiring events of nature. Though it may have once been a source of consternation or dread, solar eclipses now lead thousands of amateur astronomers and eclipse chasers to travel the globe in order to experience the dramatic view under totality. These phenomena are among the most spectacular available to observers and are given their full due in Westfall and Sheehan's comprehensive study *Transactions and Proceedings of the Royal Society of New Zealand*, 1884.

Shirley Hazzard: New Critical Essays Brigitta Olubas, 2014-10-08 Shirley Hazzard's *New Critical Essays* is the first collection of scholarly essays on the work of the acclaimed Australian born New York based author. In the course of the last half century Hazzard's writing has crossed and re-crossed the terrain of love, war, beauty, politics and ethics. Hazzard's oeuvre effortlessly reflects and represents the author's life and times, encapsulating the prominent feelings, anxieties and questions of the second half of the 20th century. It is these qualities along with Hazzard's lyrical style that place her among the most noteworthy Australian writers of the 20th century. Hazzard's work has been duly praised and admired by many, including the critic Bryan Appleyard who describes her as the greatest living writer on goodness and love. In 2011, novelist Richard Ford observed, "If there has to be one best writer working in English today it's Shirley Hazzard."

Transactions and Proceedings of the Royal Society of New Zealand Royal Society of New Zealand, 1884. Includes proceedings of member institutes of the Society and of the Society's Science Congress through v 84 1956-57.
