Tribology in Total Hip and Knee Arthroplasty Karl Knahr, 2014-04-23 Wear and osteolysis are still the most important potential problems in total hip and knee arthroplasty Although technology in arthroplasty has been improved dramatically during the past decade the clinical data relating to some implants reveal that many concerns remain During the Tribology Day within the scientific programme of the 2013 EFORT Congress in Istanbul the main topics included these concerns as well as the benefits of the materials most commonly used in total hip and knee arthroplasty This book includes the presentations delivered on the day and covers a range of interesting issues regarding metal ceramic and polyethylene articulations It provides information on the current concepts relating to tribology in total hip arthroplasty and offers a critical outlook on possible improvements in total knee arthroplasty

Total Hip Arthroplasty Karl Knahr, 2013-05-24 In recent years the Tribology Day has become a recognized highlight of the EFORT Congress and at the 2012 Congress in Berlin an entire day was once again devoted to tribology in total hip arthroplasty EFORT decided that given the wide interest in tribology publication of the presentations would be warmly welcomed by fellow professionals who were unable to attend The resulting book includes all presentations delivered on the day and covers a range of interesting topics Up to date information is provided on the various articulating materials and all the articulations

recently used in total hip arthroplasty are discussed with provision of clinical data The book will be of interest not only to experienced surgeons but also to trainees and residents who wish to extend their knowledge of total hip arthroplasty

Dowson, Duncan Dowson, 1998 Edited by Professor Duncan Dowson Advances in Medical Tribology includes contributions from the eminent engineers scientists and clinicians in this field This important collection of papers previously published as Special Issues of the Proceedings of Mechanical Engineers in the Journal of Engineering in Medicine brings together some of the most important research and clinical findings in medical tribology Key Features Provides a one volume collection of the most important work in the field Key research and clinical findings Heavily illustrated Engineers tribologists materials scientists orthopaedics specialists medical researchers and any specialists concerned with joint replacement will find this a valuable source of information **Low Friction Arthroplasty of the Hip** J. Charnley, 1978-12-01 The theme of this work is the application of the engineering theory of frictional torque to total hip replacement The author adhered tenaciously to this

theory involving the use of a small diameter femoral head throughout the epoch when the large diameter metal to metal design dominated the field During that considerable period general satisfaction with the early results rendered criticisms of the large diameter head unwelcome There was a formidable array of counter criticism the small head would pierce a film of synovial fluid the small head would wear the socket too rapidly the small head would always have a high risk of dislocation detachment of the trochanter to achieve precise orientation for the small head was unacceptable But all these objections have now been largely overcome Lubrication of high molecular weight polyethylene HMWP on metal is now accepted as being mainly by the boundary regime with thick fluid films playing no part We now know that HMWP can indeed tolerate the very high stresses imposed by the small head and in tribological theory there may even be some advantage in high stress Dislocation is now known not to be an automatic sequel to the small head
