

The Trigemino-cardiac Reflex

- Sudden onset of bradycardia and hypotension, can be life-threatening when trigeminal sensory branches stimulated.
- Caused by parasympathetic dysrhythmias and associated with other potential symptoms including gastric hypermotility and apnea.
- Possible cause of sudden adult death syndrome and other serious life-threatening cardiac conditions.

Reflex arc: sensory stimulation of trigeminal nerve through the gasserian ganglion to the sensory nucleus of the trigeminal nerve (fourth ventricle) these then connect to the nucleus ambiguus and dorsal motor nucleus of vagus which then activates the cardioinhibitory parasympathetic vagal neurons which leads to the clinical symptoms.

The Trigemino-cardiac Reflex - An Example of Reflexive Heart Rhythm Change Tumul Chowdhury, 2015 The trigemino-cardiac reflex (TCR) is defined as the sudden onset of parasympathetic dysrhythmia sympathetic hypotension apnoea or gastric hyper motility during mechanical thermal stimulation of any of the sensory branches of the trigeminal nerve The risk factors that are already known for increasing the prevalence of the TCR include anatomical location hypercapnia hypoxemia light general anaesthesia age more pronounced in children the nature of the provoking stimulus stimulus strength and duration and different drugs Already different potential confounders are also identified This discussion about risk factors has its importance because of the substantial consequences for functional outcome after intraoperative TCR occurrence But there remains still a substantial lack of thorough understanding of the TCR the current treatment options for patients with TCR include a mostly empirical approach i risk factor identification and modification ii prophylactic measures of vital signs and iii administration of vagolytic agents or sympathomimetics In this context we have now created different thinking models so that we can preoperatively plan a skull base surgery procedure safely in relation to a potential occurrence of the TCR episodes This chapter provides an overview of this unique reflex that presents a unique interaction between heart and brain In addition this also illustrates the mechanism of various cardiac rhythm changes related to the TCR
