Duellman,2011-01-01 Probably no ecological group of hylid frogs some Hyla plus Plectrohyla and Ptychohyla in Middle America is so poorly known as those species that live in the cloud forests on steep mountain slopes and breed in cascading mountain streams During the last half of the nineteenth century most of the species of hylids living in the lowlands of southern Mexico and northern Central America were named and described Despite the extensive collecting by Salvin and Godman Nelson and Goldman and the various expeditions of the Mission Scientifique no members of the genusPtychohyla were obtained until 1927 when in the mountains of El Salvador Ruben A Stirton found a small tree frog that subsequently was described and named Hyla euthysanota by Kellogg 1928 Until recently frogs of this genus were known from few specimens and in the literature by nearly as many names Although I first collected Ptychohyla in 1956 it was not until 1960 that special efforts were made to obtain specimens of this genus The summer of 1960 was spent in southern Mexico and Guatemala where every accessible stream in the cloud forests was searched for tree frogs especially Ptychohyla and Plectrohyla Similar but less extensive investigations were carried out in 1961 and 1962 The result of this field

work is a rather large collection of Ptychohyla representing all of the known species plus tape recordings of the breeding calls and tadpoles of all of the species. Previously I have discussed the nomenclature of one of the species Duellman 1960 and have described two new species Duellman 1961. In the latter paper I made reference to a future account this one that would deal with the systematics and biology of the entire genus. Although I have series of specimens, tadpoles, osteological preparations and recordings of breeding calls, thereby having a wide array of data at my disposal, much still remains to be learned about these frogs, especially about various aspects of their life histories. Even the validity of the genus is open to question; this problem is discussed at length in the section beyond entitled Ptychohyla as a Natural Assemblage.

The Tree Frog Hidetomo Oda, 1986. Discusses the life cycle and behavior patterns of tree frogs.

White's Tree Frog Adam J. Famous, 2021-01-30. White's tree frogs toes have developed highly adhesive pads for climbing trees, plants and even other surfaces. Adults can reach about 5 inches but rarely exceed 4.5 inches from snout to vent.

Red-Eyed Tree Frog or Wood Frog (Wild World: Hot and Cold Animals) Marilyn Easton, 2022-03-01. Discover how different animals with the same name can be. Red-eyed tree frogs and wood frogs are both types of frogs but they are very different. Red-eyed tree frogs live in the trees in the warm rainforest and hunt at night. Wood frogs live on the ground in forests with hot summers and cold winters and hunt during the day. Discover the many reasons why these frogs are hot and cold.

ABOUT THE SERIES Did you know that there are a lot of animals with the same name that live in very different environments? This brand NEW series will have full color photographs throughout with short blocks of text to entertain and explain how some animals like it hot and others like the colder the better.

Tree Frogs Moira Rose Donohue, 2019-09. An introduction to the tree frog including its life cycle and how humans impact it and its environment.
