Respiratory Care George G. Burton, John Elliott Hodgkin, Jeffrey J. Ward, 1991

Rapid ABG Interpretation Desmond Allen, 2014-11-26 Desmond Allen has been a credentialed respiratory therapist since 1975. He has managed or been the clinical coordinator of four cardiopulmonary departments and the clinical preceptor for numerous students. He holds a PhD in education and another in health administration. The rapid interpretation of ABGs need not be the ominous task that it is for so many. Herein clinicians will learn to interpret ABGs rapidly by answering three simple questions: Is the pH normal, acidotic, or alkalotic? Is the pH correctly predicted by the PaCO₂? If the pH is abnormal, is the abnormality caused, compensated, or exacerbated by the PaCO₂? By answering these simple questions, we have all the information we need for an accurate interpretation, whether the ABG is normal, respiratory, or metabolic acidosis or alkalosis, or both acute, compensated, or partially compensated. The second section covers the fundamentals of BiPAP and mechanical ventilation management. These guidelines are presented so as to be employed in real time by physicians and respiratory therapists, or to be converted into policies and procedures.

Guide to Mechanical Ventilation and Intensive Respiratory Care Lynelle N. B. Pierce, 1995. This handy guide focuses on respiratory support appliances and various aspects of mechanical ventilation. Beginning with an overview of pulmonary anatomy and physiology, the book reviews the principles and applications of physical and pharmacologic theories used for the pulmonary system. A special section on advanced modes of mechanical ventilation is also included. Provides a firm scientific basis for patient care and interpretation of complex data to aid understanding of how physiologic processes are altered when mechanical ventilation is applied. Discusses methods of airway maintenance, including administration of oxygen, humidification, and aerosol therapy; bronchial hygiene techniques; and lung expansion therapies. Details every phase of mechanical ventilation, from patient selection and how the ventilator performs the respiratory cycle to how settings are chosen and how alarm parameters are set. Investigates complications, how to monitor the patient-ventilator system, troubleshooting, and problem intervention. Describes traditional and nonconventional modes, as well as alternative methods of mechanical ventilation. Covers invasive and noninvasive patient monitoring techniques, including pulse oximetry, arterial and mixed venous blood gas analysis, and more. Addresses treatment of tissue oxygenation imbalances, methods of weaning, and more.
