Transactions on Aspect-Oriented Software Development VIII Shmuel Katz,Mira Mezini,2011-06-22 This volume the 8th in the Transactions on Aspect Oriented Software Development series contains two regular submissions and a special section consisting of five papers on the industrial applications of aspect technology The regular papers describe a framework for constructing aspect weavers and patterns for reusable aspects The special section begins with an invited contribution on how AspectJ is making its way from an exciting new hype topic to a valuable technology in enterprise computing The remaining four papers each cover different industrial applications of aspect technology which include a telecommunication platform a framework for embedding user assistance in independently developed applications a platform for digital publishing and a framework for program code analysis and manipulation

Transactions on Aspect-Oriented Software Development II Awais Rashid,2006-11-03 The LNCS Journal Transactions on Aspect Oriented Software Development is devoted to all facets of aspect oriented software development AOSD techniques in the context of all phases of the software life cycle from requirements and design to implementation maintenance and evolution The focus of the journal is on approaches for systematic identification modularization representation and composition of crosscutting concerns i e the aspects and evaluation of such approaches and their impact on improving quality attributes of software systems This volume the fourth in the Transactions on Aspect Oriented Software Development series presents 5 revised papers together with 2 guest editors introductions The papers which focus on mapping of early aspects across the software lifecycle and aspects and software evolution have passed through a careful peer reviewing process carried out by the journal s Editorial Board and expert referees

Design Science Research. Cases Jan vom Brocke,Alan Hevner,Alexander Maedche,2020-09-23 Design Science Research is a powerful paradigm enabling researchers to make important contributions to society and industry Simply stated the goal of DSR is to generate knowledge on how to find innovative solutions to important problems in the form of models methods constructs and instantiations Over the past 20 years the design science research DSR paradigm has developed into an established paradigm in Information Systems Research and it is of strong uptake in many other disciplines including Management Science and Computer Science This book provides a collection of twelve DSR cases presented by experienced researchers in the field It offers readers access to real world DSR studies together with the authors reflections on their research processes These cases will support researchers who want to engage in DSR and represent a valuable addition to existing introductions to DSR methods and processes Readers will learn from the hands on experiences of respected experts who have conducted extensive DSR in a range of application contexts

Aspect-Oriented Requirements Engineering Ana Moreira,Ruzanna Chitchyan,João Araújo,Awais Rashid,2013-11-19 Broadly scoped requirements such as security privacy and response time are a major source of complexity in modern software systems This is due to their tangled inter relationships with and effects on other requirements Aspect Oriented Requirements Engineering AORE aims to

facilitate modularisation of such broadly scoped requirements so that software developers are able to reason about them in isolation one at a time AORE also captures these inter relationships and effects in well defined composition specifications and in so doing exposes the causes for potential conflicts trade offs and roots for the key early architectural decisions Over the last decade significant work has been carried out in the field of AORE With this book the editors aim to provide a consolidated overview of these efforts and results The individual contributions discuss how aspects can be identified represented composed and reasoned about as well as how they are used in specific domains and in industry Thus the book does not present one particular AORE approach but conveys a broad understanding of the aspect oriented perspective on requirements engineering The chapters are organized into five sections concern identification in requirements concern modelling and composition domain specific use of AORE aspect interactions and AORE in industry This book provides readers with the most comprehensive coverage of AORE and the capabilities it offers to those grappling with the complexity arising from broadly scoped requirements a phenomenon that is without doubt universal across software systems Software engineers and related professionals in industry as well as advanced undergraduate and post graduate students and researchers will benefit from these comprehensive descriptions and the industrial case studies

Formal Approaches to Software Testing and Runtime Verification Klaus Havelund, Manuel Núñez, Grigore Rosu, Burkhart Wolff, 2006-12-07 This book constitutes the thoroughly refereed post proceedings of the First Combined International Workshops on Formal Approaches to Software Testing FATES 2006 and on Runtime Verification RV 2006 held within the scope of FLoC 2006 the Federated Logic Conference in Seattle WA USA in August 2006 Coverage discusses formal approaches to test and analyze programs and monitor and guide their executions by using various techniques

Emergent Interfaces for Feature Modularization Márcio Ribeiro, Paulo Borba, Claus Brabrand, 2014-11-13 Developers frequently introduce errors into software systems when they fail to recognise module dependencies Using forty three software families and Software Product Lines SPLs where the majority are commonly used in industrial practice the authors reports on the feature modularization problem and provides a study of how often it may occur in practice To solve the problem they present the concept of emergent feature modularization which aims to establish contracts between features to prevent developers from breaking other features when performing a maintenance task

Proceedings of the 9th Workshop on Aspects, Components, and Patterns for Infrastructure Software (ACP4IS '10) Bram Adams, Michael Haupt, Daniel Lohmann, 2010 Aspect oriented programming component models and design patterns are modern and actively evolving techniques for improving the modularization of complex software In particular these techniques hold great promise for the development of systems infrastructure software e g application servers middleware virtual machines compilers operating systems and other software that provides general services for higher level applications The developers of infrastructure software are faced with increasing demands from application programmers needing higher level support for application development Meeting these demands requires careful

use of software modularization techniques since infrastructural concerns are notoriously hard to modularize Aspects components and patterns provide very different means to deal with infrastructure software but despite their differences they have much in common For instance component models try to free the developer from the need to deal directly with services like security or transactions These are primary examples of crosscutting concerns and modularizing such concerns are the main target of aspect oriented languages Similarly design patterns like Visitor and Interceptor facilitate the clean modularization of otherwise tangled concerns Building on the ACP4IS meetings at AOSD 2002 2009 this workshop aims to provide a highly interactive forum for researchers and developers to discuss the application of and relationships between aspects components and patterns within modern infrastructure software The goal is to put aspects components and patterns into a common reference frame and to build connections between the software engineering and systems communities

Security and Policy Driven Computing Lei Liu, 2016-04-19 Security and Policy Driven Computing covers recent advances in security storage parallelization and computing as well as applications The author incorporates a wealth of analysis including studies on intrusion detection and key management computer storage policy and transactional management The book first describes multiple variables and ind **The JCop language specification : Version 1.0, April 2012** Malte Appeltauer, Robert Hirschfeld, 2012 Program behavior that relies on contextual information such as physical location or network accessibility is common in today s applications yet its representation is not sufficiently supported by programming languages With context oriented programming COP such context dependent behavioral variations can be explicitly modularized and dynamically activated In general COP could be used to manage any context specific behavior However its contemporary realizations limit the control of dynamic adaptation This in turn limits the interaction of COP s adaptation mechanisms with widely used architectures such as event based mobile and distributed programming The JCop programming language extends Java with language constructs for context oriented programming and additionally provides a domain specific aspect language for declarative control over runtime adaptations As a result these redesigned implementations are more concise and better modularized than their counterparts using plain COP JCop s main features have been described in our previous publications However a complete language specification has not been presented so far This report presents the entire JCop language including the syntax and semantics of its new language constructs **Handbook of Research on Mobile Software Engineering: Design, Implementation, and Emergent Applications** Alencar, Paulo, Cowan, Donald, 2012-05-31 The popularity of an increasing number of mobile devices such as PDAs laptops smart phones and tablet computers has made the mobile device the central method of communication in many societies These devices may be used as electronic wallets social networking tools or may serve as a person s main access point to the World Wide Web The Handbook of Research on Mobile Software Engineering Design Implementation and Emergent Applications highlights state of the art research concerning the key issues surrounding current and future challenges associated with the

software engineering of mobile systems and related emergent applications This handbook addresses gaps in the literature within the area of software engineering and the mobile computing world
