Kaneene, 2014-02-12 Zoonotic Tuberculosis Mycobacterium bovis and Other Pathogenic Mycobacteria Third Edition is a comprehensive review of the state of the art in the control and elimination of infections caused by Mycobacterium tuberculosis complex in animals and humans This update to the most complete and current reference available on Mycobacterium bovis includes new coverage of the latest molecular techniques more information on human infection and One Health updates to the information on the International Union Against Tuberculosis and Lung Disease IUATLD the World Health Organization WHO Pan American Health Organization PAHO and the United States Department of Agriculture s USDA National Tuberculosis Eradication Program and coverage of additional African countries The Third Edition upholds the book s reputation as a truly global resource on M bovis Written by an international list of tuberculosis experts chapters cover the status of tuberculosis in many regions throughout the world and deal with issues related to the detection spread and control of Mycobacterium bovis as well as the economic impact of outbreaks Zoonotic Tuberculosis Mycobacterium bovis and Other Pathogenic Mycobacteria offers valuable information for public health officials medical doctors state and federal regulatory veterinarians veterinary practitioners and animal caretakers

Bovine Tuberculosis Mark Chambers, Stephen Gordon, Francisco Olea-Popelka, Paul Barrow, 2018-04-13 This book is contemporary topical and global in its approach and provides an essential comprehensive treatise on bovine tuberculosis and the bacterium that causes it Mycobacterium bovis Bovine tuberculosis remains a major cause of economic loss in cattle industries worldwide exacerbated in some countries by the presence of a substantial wildlife reservoir It is a major zoonosis causing human infection through consumption of unpasteurised milk or by close contact with infected animals Following a systematic approach expert international authors cover epidemiology and the global situation microbial virulence and pathogenesis host responses to the pathogen and diagnosis and control of the disease Aimed at researchers and practising veterinarians this book is essential for those needing comprehensive information on the pathogen and disease and offers a summary of key information learned from human tuberculosis research It will be useful to those studying the infection and for those responsible for controlling the disease

Bovine Tuberculosis - International Perspectives on Epidemiology and Management Andrew W. Byrne, Adrian R. Allen, Daniel J. O'Brien, Michele A. Miller, 2019-10-17 Bovine tuberculosis bTB is a significant zoonotic pathogen with a global distribution and a considerable economic impact It has a notoriously complex epidemiology varying by affected region and often involving multiple host species Here we present an international collection of papers that address both national and international factors impacting on the control of bovine tuberculosis We hope this Research Topic will provide a forum which may generate a greater understanding of the disease in a wider context and inform future eradication efforts through the design of more effective interventions

Molecular Epidemiology Study of Mycobacterium Tuberculosis Complex Yogendra Shah, 2021-09-15 Tuberculosis TB which is caused by

the infectious agent *Mycobacterium tuberculosis* MTB is a major global public health problem that infects one third of the world's population. This book provides an overview of the molecular epidemiology, pattern, transmission dynamics, host response, evolution, and pathogenesis mechanisms of TB. Chapters explore such topics as mechanisms associated with increasing trends of drug-resistant TB, the development of anti-mycobacterial drugs, genotyping tools, diagnosis, and treatment of latent tuberculosis infection, and more. Recent Advances in Bovine Tuberculosis Federico Blanco, Flabio R.

Araujo, Jacobus Henri De Waard, Christophe J. Queval, 2022-07-01 *Neglected Diseases in Monkeys* Sascha Knauf, Lisa Jones-Engel, 2020-12-14 This book offers a valuable resource reviewing the current state of knowledge concerning the pathology and epidemiology of infectious diseases in both captive and wild monkeys. The One Health concept forms the framework of all chapters. The multidisciplinary team of authors addresses neglected diseases caused by the three major pathogen groups: bacteria, viruses, and parasites. Moreover, the volume discusses key virulence factors such as the evolution of antibiotic resistance and the ecological drivers of and human influence on pathogen transmission. Demonstrating how researchers working on monkey diseases are increasingly thinking outside the box, this volume is an essential reference guide to the field of One Health and will serve as an asset for stakeholders in conservation, healthcare, and research organizations that face the challenge of moving beyond classical human-oriented approaches to health. Tuberculosis in Animals: An African Perspective Asseged B. Dibaba, Nicolaas P. J. Kriek, Charles O. Thoen, 2019-07-01 This book recounts the biology of *M. bovis* followed by the status of bovine tuberculosis (bTB) in African countries, primarily based on zoonotic and epidemiological field reports. Since the accumulation of data is valueless unless it led to practicable control measures, emphasis is put on locally adapted protocols for future control of the disease. In order to systematically evaluate the knowledge base of bTB, Epidemiologic Problem Oriented Approach (EPOA) methodology was used. The methodology is composed of two triads: i) the problem identification/characterization triad, which is mainly descriptive in nature, and ii) the problem management/solution/mitigation triad, which is mainly geared toward problem management/solution. See figure. The first triad comprises three pillars: i) agent, ii) host, and iii) environment, and the second one: i) therapeutics/treatment, ii) prevention/control, and iii) health maintenance/promotion. The two triads are linked together by the diagnostic/procedure linkage. The systematic and detailed studies of the Host-Agent-Environment interactions are the building blocks to the understanding of agent transmission pathways and disease spread. These may include data about the disease status of the country, the nature of the disease agent and its hosts, the modes of transmission, the wildlife reservoirs in nature, persistence of infection, and agent survival in animal products and the environment. The problem identification and characterization triad identifies these interactions. Once a problem has been identified and well understood, the next step is to minimize the risk of transmission and spread of a disease. This area, referred to as problem solution/management triad, consists of problem management alternatives that rely upon prevention/control and health maintenance/promotion of the disease in livestock, wildlife, and humans, with the

emphasis on resource poor developing countries in Africa Women in veterinary epidemiology and economics Alejandra Victoria Capozzo, Flavie Vial, 2023-06-09 **The Top Ten Diseases of All Time** Stacey Smith?, 2023-10-24 Infectious diseases have been with us for millennia and continue to pose a threat from the irritation of flu season to the potential extinction of our species We instinctively fear them and alter our behaviour as a result The reason we bury bodies six feet deep is because that was the depth that stopped plague transmission from the dead in the Middle Ages Many religious practices such as avoiding certain meats were established because of foodborne disease transmission In The Top Ten Diseases of All Time Stacey Smith presents the top ten deadliest diseases and their effects on society providing a wealth of information about the trajectory and terrible impact of each disease and humanity's reaction to these diseases throughout the millennia Did you know for example that The medical symbol evolved from the worms wrapped around a stick because that was the only way to remove Guinea worms from the body so having a stick meant you were a doctor Smallpox is the third worst disease ever yet it remains the only successfully eradicated human disease but not for long thanks in part to a successful vaccine in part to photographic recognition cards and in part due to helicopter led forced vaccinations of whole villages in the former Yugoslavia This brings up issues of individual rights versus public good that remain relevant today Four diseases were targeted for eradication in the 20th century the failure to do so led directly to the creation of the environmental movement The inability of priests to explain how to stop the plague in the Middle Ages broke the back of the church as an all powerful and all knowing institution and led to colonialism and slavery The Top Ten Diseases of All Time offers a fascinating overview of the deadliest diseases to spread throughout the world including HIV AIDS Spanish Flu Measles The Black Death Smallpox and others **Basic Biology and Applications of Actinobacteria** Shymaa Enany, 2018-12-05 Actinobacteria have an extensive bioactive secondary metabolism and produce a huge amount of naturally derived antibiotics as well as many anticancer anthelmintic and antifungal compounds These bacteria are of major importance for biotechnology medicine and agriculture In this book we present the experience of worldwide specialists in the field of Actinobacteria exploring their current knowledge and future prospects **Essential Tuberculosis** Giovanni Battista Migliori, Mario C. Raviglione, 2021-07-26 This textbook covers the full spectrum of tuberculosis related topics in a comprehensive yet easy to follow readily accessible format Filling a significant gap in tuberculosis literature it addresses tuberculosis sensu latu mirroring the content of the London Queen Mary University tuberculosis Diploma Covering all aspects related to this condition from prevention diagnosis and treatment to public and global health the book provides a broad overview of tuberculosis management Further it includes a wealth of case studies and exercises making it an essential guide for all staff involved in tuberculosis management Written by an international and interdisciplinary panel of experts the book appeals to a broad readership including students postdoctoral fellows clinicians researchers and nurses as well as public health officers working in tuberculosis control programs **Vermin, Victims and Disease** Angela

Cassidy,2019-09-25 This open access book provides the first critical history of the controversy over whether to cull wild badgers to control the spread of bovine tuberculosis bTB in British cattle This question has plagued several professional generations of politicians policymakers experts and campaigners since the early 1970s Questions of what is known who knows who cares who to trust and what to do about this complex problem have been the source of scientific policy and increasingly vociferous public debate ever since This book integrates contemporary history science and technology studies human animal relations and policy research to conduct a cross cutting analysis It explores the worldviews of those involved with animal health disease ecology and badger protection between the 1970s and 1990s before reintegrating them to investigate the recent public polarisation of the controversy Finally it asks how we might move beyond the current impasse

Epidemiology and Control of Notifiable Animal Diseases Julio Álvarez,Douwe Bakker,Javier Bezos,2019-05-09

Surveillance early detection control and eradication of notifiable animal diseases is of critical importance for countries in order to maintain or improve their animal health status This requires the collaboration of all stakeholders involved including animal health authorities livestock industry and veterinary research institutions among others Prevention control and eradication programs must take into account the characteristics of the host including potential reservoirs the pathogen transmissibility virulence and the environment temperature animal density but also the socio economic context in which they have to be implemented highly influenced by funding availability while at the same time guaranteeing compliance with international trade regulations This has led to the adoption of a wide range of approaches to address the risk posed by specific pathogens in different countries and at the same time similar strategies have yielded very different results in different regions This Research Topic includes a variety of manuscripts focusing on different aspects of surveillance control and eradication of diseases of critical importance for livestock including cattle swine and wildlife in an attempt to provide an overview of the current situation in different countries **American Journal of Veterinary Research** ,2014 Volumes for 1956 include selected papers from the proceedings of the American Veterinary Medical Association *One Health* Kevin

Bardosh,2016-02-12 Zoonotic diseases pathogens transmitted from animals to people offer particularly challenging problems for global health institutions and actors given the complex social ecological dynamics at play New forms of risk caused by unprecedented global connectivity and rapid social and environmental change demand new approaches One Health highlights the need for collaboration across sectors and disciplines to tackle zoonotic diseases However there has been little exploration of how social political and economic contexts influence efforts to do One Health This book fills this gap by offering a much needed political economy analysis of zoonosis research and policy Through ethnographic qualitative and quantitative data the book draws together a diverse number of case studies These include chapters exploring global narratives about One Health operationalization and prevailing institutional bottlenecks the evolution of research networks over time and the histories and politics behind conflicting disease control approaches The themes from these chapters are

further contextualized and expanded upon through country specific case studies from Kenya Zambia Nigeria Ghana and Sierra Leone exploring the translation of One Health research and policy into the African context This book is a valuable resource for academic researchers students and policy practitioners in the areas of global health agriculture and development

Diseases of Cattle in the Tropics I. Ristic,Ian McIntyre,2013-11-11 Most of the future increase in livestock production is expected to occur in the tropical and subtropical regions of the world Cattle are the most numerous of the ruminant species in the tropics and provide the largest quantity of animal food products More than one third of the world's cattle are found in the tropics Disease is the major factor which prohibits full utilization of these regions for cattle production Various infectious and transmissible viral rickettsial bacterial and particularly protozoan and helminthic diseases are widespread in the tropics and exert a heavy toll on the existing cattle industry there This uncontrolled disease situation also discourages investment in cattle industries by private and government sectors In Africa alone it is estimated that 125 million head of cattle could be accommodated in the tropical rainbelt if the disease and other animal husbandry factors could be resolved The potential of efficient cattle production under more favorable conditions prompted various international agencies to establish a multi million dollar International Laboratory for Research in Animal Diseases ILRAD in Nairobi Kenya Africa In South America principal sites for raising cattle are shifting to the savannah lands because the more fertile soils are being used for crop production however in the savannahs also disease remains the most powerful deterrent in implementing the cattle industry
