

Zooplankton Identification Guide

Prepared by Emi Yamaguchi & Caitlin Bell (2007)

adult copepod

Copepods are the most common zooplankton worldwide. They are an integral part of the food web as both predator and prey.

copepod nauplius

The nauplius is a common early larval stage of crustaceans. Some nauplii have spines while others do not.

polychaete worm larvae

These organisms are the marine relative of earthworms. The larvae are found in the plankton. The adult form, seen in the invertebrate lab, is benthic.

barnacle nauplius

Barnacle nauplii are distinguished from crab larvae by the "spikes" on their heads. This stage comes before the cypris stage.

cypris larva

The cypris is the final larval stage of a barnacle. It must find a suitable attachment site to become an adult.

adult *Oikopleura* sp.

This organism is actually an adult tunicate that retains its notochord and tail. The tail beats back and forth rapidly to create a current that brings food near the mouth.

tunicate (sea squirt) larva

This "tadpole" is an early life stage of a tunicate. Tunicates are related to humans because they have a notochord, although it disappears as the larva matures. Sea squirts, found in the invertebrate lab, are adult tunicates.

Zooplankton of the Atlantic and Gulf Coasts William S. Johnson, Dennis M. Allen, 2012-10-05 Zooplankton are critical to the vitality of estuaries and coastal waters In this revised edition of Johnson and Allen's instant classic readers are taken on a tour of the miniature universe of zooplankton including early developmental stages of familiar and diverse shrimps crabs and fishes Zooplankton of the Atlantic and Gulf Coasts details the behavior morphology and coloration of these tiny aquatic animals Precise descriptions and labeled illustrations of hundreds of the most commonly encountered species provide readers with the best source available for identifying zooplankton Inside the second edition an updated introduction that orients readers to the diversity habitats environmental responses collection history and ecological roles of zooplankton descriptions of life cycles illustrations including 88 new drawings that identify 340 plus taxa and life stages range habits and ecology for each entry located directly opposite the illustration appendices with information on collection and observation techniques and citations of more than 1 300 scientific articles and books *Marsh Mud and Mummichogs* Evelyn B.

Sherr, 2015-05-15 This book writes marine biologist Evelyn B Sherr is meant to give others an understanding of the fascinating life of the region from the smallest creatures in marsh mud and estuarine water to the mummichogs and multitudes of other animals that find food and shelter in the vast expanses of marsh grass in the sounds and along the beaches of the Georgia Isles Sherr not only spent years doing research in coastal Georgia she began her family there Although Sherr's career would take her around the world this special place stuck with her Here she shares her deep knowledge of the remarkable environment that she her scientist husband and their two children explored time and again Dr Sherr is the ideal companion with whom to discover coastal Georgia She points out its swimming running flying drifting and wriggling wildlife and tells how it all exists in balance in a landscape subject to its own daily ebbs and flows its own seasonal cycles As we learn about Georgia's distinctive intertidal salt marshes subtidal estuaries and open beaches and dunes Sherr reveals the creatures that support and are supported by these habitats the microbes in estuarine water and in marsh mud the zooplankton swarming in the tidal rivers and sounds and numerous fish reptiles birds and mammals **Draft**

Environmental Impact Statement for Preferred Alternative Location for a Fleet Ballistic Missile (FBM) Submarine Support Base, Kings Bay, Georgia, 1980 **Pond Aquaculture Water Quality Management** Claude E. Boyd, C.S.

Tucker, 2012-12-06 The efficient and profitable production of fish crustaceans and other aquatic organisms in aquaculture depends on a suitable environment in which they can reproduce and grow Because those organisms live in water the major environmental concern within the culture system is water quality Water supplies for aquaculture systems may naturally be of low quality or polluted by human activity but in most instances the primary reason for water quality impairment is the culture activity itself Manures fertilizers and feeds applied to ponds to enhance production only can be partially converted to animal biomass Thus at moderate and high production levels the inputs of nutrients and organic matter to culture units may

exceed the assimilative capacity of the ecosystems The result is deteriorating water quality which stresses the culture species and stress leads to poor growth greater incidence of disease increased mortality and low production Effluents from aquaculture systems can cause pollution of receiving waters and pollution entering ponds in source water or chemicals added to ponds for management purposes can contaminate aquacultural products Thus water quality in aquaculture extends into the arenas of environmental protection and food quality and safety A considerable body of literature on water quality management in aquaculture has been accumulated over the past 50 years The first attempt to compile this information was a small book entitled *Water Quality in Warmwater Fish Ponds* Boyd I 979a **American Book Publishing Record** ,2003

from microbes to vertebrate higher predators This book comes at a time when new technologies and approaches allow the implications of climate change and other direct human impacts on Antarctica to be viewed at a range of scales across entire regions whole ecosystems and down to the level of species and variation within their genomes Chapters address both Antarctic terrestrial and marine ecosystems and the scientific and management challenges of the future are explored
