including especially class and gender politics Elizabeth Potter argues that even good science is sometimes influenced by such issues and she shows that the work leading to the Gas Law while certainly based on physical evidence was also shaped by class and gendered considerations At issue were two descriptions of nature each supporting radically different visions of class and gender arrangements Boyle s Law rested on mechanistic principles but Potter shows us an alternative law based on hylozoic principles the belief that all matter is animated whose adherents challenged social stability and the status quo in 17th century England Elizabeth Potter Alice Andrews Quigley Professor of Women s Studies at Mills College is co editor of *Feminist Epistemologies* and author of numerous articles on feminist epistemology and feminist philosophy of science *Race Gender and Science* Anne Fausto Sterling general editor June 2001 232 pages 5 figs 6 x 9 index cloth 0 253 33916 2 34 95 L 26 50 paper 0 253 21455 6 17 95 s 13 95

Reinventing the Male Homosexual Robert Alan Brookey, 2002-03-15

Reinventing the Male Homosexual The Rhetoric and Power of the Gay Gene examines the assumption that embracing the biological research on homosexuality is a viable political strategy for the gay rights movement The biological argument for gay rights is treated as a bio rhetoric a means of incorporating scientific research into public debates The book investigates the biological research on which this gay rights argument is based and explores how male homosexuality is conceptualized in the fields of behavioral genetics neuroendocrinology sociobiology and evolutionary psychology Robert Alan Brookey demonstrates that most biological research begins with the assumption that male homosexuality is a state of physical effeminate pathology Although biological research may seem to support a pro gay rights agenda the same research can actually be used to support conservative political interests

Toward a Global Science Susantha Goonatilake, 1998 Asian science such as mathematics Chinese printing gunpowder and the compass all contributed to the development of European science During

the last few centuries however scientific contributions with Asian roots have diminished and been marginalized and deligitimised Yet the center of the world economy today is shifting to Asia with shifts in science and technology bound to follow Toward a Global Science is driven by the proposition that pre Renaissance acquisition of Asian knowledge did not exhaust Asian civilization s potential contribution There are many useful elements to modern science still lying hidden in Asian civilizational stores waiting to be mined The author gives details of recent contributions from South Asian medicine mathematics and psychology and explores how South Asian inputs can be useful in navigating the philosophical and ethical problems raised by two dominant technologies of the future namely biotechnology and information technology As an illustrative example it describes how a fruitful marriage of one technology virtual reality with South Asian philosophy can enliven both the technology as well as philosophy It also examines how Asian positions could be used to feed some key contemporary philosophical discussions on science Using a model of the civilizational construction of science the book views science without Eurocentric blinders It documents how science was built initially by transfers from non European civilizations and why the given historiography of science has to be rethought Throughout the book the author gives examples of parallels and antecedents between East and West in science and estimates the potential reservoir of Asian knowledge in each field The book also deals with the many knotty problems in recovering science from past traditions The author distinguishes between his secular efforts from religious and other attempts that claim the equivalence of all knowledge systems
