Solving the Powertrain Puzzle Schaeffler Technologies GmbH & Co. KG,2014-09-12 Every four years Schaeffler provides an insight into its latest developments and technologies from the engine transmission and chassis as well as hybridization and electric mobility sectors In 2014 the Schaeffler Symposium with the motto Solving the Powertrain Puzzle took place from 3th to 4th of April in Baden Baden

Mobility for tomorrow is the central theme of this proceeding. The authors are discussing the different requirements which are placed on mobility in different regions of the world. In addition to the company's work in research and development, a comprehensive in-house mobility study also provides a reliable basis for the discussion. The authors are convinced that there will be a paradigm shift in the automotive industry. Issues such as increasing efficiency and advancing electrification of the powertrain, automatic and semi-automatic driving as well as integration in information networks will define the automotive future. In addition, the variety of solutions available worldwide will become increasingly more complex, and mobility patterns will also change rapidly. However, this does not mean that cars will drive virtually in the future. Powertrains based on internal combustion engines will still dominate for a very long time and demonstrate new strengths in combination with hybrid drives. Transmissions will also gain in importance as the link between the internal combustion engine and electric motor. The proceeding *Solving the Powertrain Puzzle* contains 34 technical papers from renowned experts and researchers in the field of automotive engineering. *The Engineer*, 1975; **Automotive Engineering International**, 2008; *F&S Index Europe Annual*, 1999.

NSU Ro80 - The Complete Story Martin Buckley, 2023-02-14. Launched in 1967, the NSU Ro80 had modern aerodynamic styling, a technologically advanced Wankel rotary engine, and was voted Car of the Year in 1968. However, after the initial positive reception, the car developed a reputation for unreliability with problems arising as early as 15,000 miles, and many vehicles required a rebuilt engine before 30,000 miles. Despite the company resolving these reliability issues in both existing and new vehicles and offering a generous warranty, the damage to the car's reputation was done. The NSU Ro80 is the most celebrated motoring lost cause of the second half of the twentieth century, outranking the likes of the Edsel and the DeLorean because, unlike those statements of misplaced optimism and ego, it was a good car. Not just good, the NSU Ro80 is one of the great saloons. Launched in September 1967, the Ro80 was an all-new four-door five-seater from a West German company that post-war had never made anything other than economy runabouts, motorcycles, and mopeds. That alone should have been enough of a risk, but this was also the world's first purpose-built Wankel-engined family saloon. This compact, refined, and elegantly simple power unit was the first really new concept in the realm of internal combustion engines to achieve mass production for ninety years. A car like the Ro80 could only really have come from Germany, where there was a passion for research and a pride in engineering not found elsewhere in Europe. With front-wheel drive, superb power steering, and four-wheel disc brakes, the car had top handling and driver appeal. Quite simply, it was a masterpiece considered by many to be the finest vehicle of its type in the world. But with one fatal flaw, its engine. With over 300 archive photographs, drawings, and diagrams, this book tells the story of the NSU.
