

WHAT IS A ZOMBIE?

TYPES OF ZOMBIE

Once a human has turned into a zombie, they will enter a three stage process of transformation. All will go through these stages, but factors such as climate, body mass and the amount of infected material will have an impact.

To be clear, there are not stages of the 'Dead' - there will be movement later. For now, these humans have already transformed into the undead. They are fully infected with zombie virus and display symptoms of the zombie condition. In 2006, Dr. Michael described the

zombie fighting community when he declared that 'all zombies are not equal'. He later went on to expand on a scientific theory of zombie evolution, which describes how the undead develop over the course of time after infection. For many years, scientists had offered accounts of desiccated zombies or huge blooded corpse monsters, but the fledgling science of 'Zombology' had no unified theory to explain these anomalies. Dr. Michael's stages of zombie evolution changed all of this and they are presented below.

WHAT IS A ZOMBIE? CLIMATIC CONDITIONS

Scientists have now proved that the climatic conditions which have the greatest influence on the 'type' of creature that zombies will form after 24hrs. The average fighters in hot and humid, tropical or sub-tropical climates are likely to have more ghoulish and grotesque bodies whereas fighters in cold and drier conditions will have drier and skeletal forms.

Hot	Dry
Humid	Wet

ZOMBIE EVOLUTION

STAGE 1 FRESH (NOSE, NECK, BLOOD)

These walking dead have completed the zombie virus in the last few days. They have a pale, greyish skin colour and a bloodless complexion. Some will appear almost human in appearance, others will be showing major body parts irregularly. Their movements will be stiff and awkward. They will be unable to speak and they will have an unending interest in feeding on your flesh.

STAGE 2 PUTREFIED (NOSE, FINGER, NAILS, BIG BOYS, SLAVES)

In this stage, zombies generally start to show signs of decomposition. For example, you may see pale blue marks and green fungus patches appearing. However, the decomposition process is greatly accelerated by the zombie condition. In humid conditions, insects and/or gastric liquid may reach the corpse in an extremely fast

STAGE 3 DESICCATED (CLASSED, RED, STIFF, STENCHES, NIPPS)

Most of the walking dead will move into this 'classic' zombie phase of development. These creatures will be being frozen in appearance. Their skin will be dry and cracked, their mouths dry and cracked. By this stage, their clothes will be mostly torn and their eyes turned to hollow shells, even ghouls in some cases. Climate conditions will determine the actual level of moisture in a zombie corpse, with dry conditions leading to a skeletal creature in which the skin hangs like a ruff, almost transparent. Over time, many of these body parts may just fall off with the creature becoming difficult to recognise.

ONCE INFECTED BY BITE OR FLUID EXCHANGE, A HUMAN WILL TRANSFORM INTO A ZOMBIE AND MUST THROUGH THESE ZOMBIE TYPES

TROPICAL High temperature, high humidity

Most zombies of this kind will exhibit a variable response to the climate and trigger surrounding these walking corpses.

- High numbers of blood
- High rate of decomposition
- More frequent growth

DESERT High temperature, low humidity

Other referred to as 'desert zombies', the dead will be the red and dry with more decomposition than in other regions.

- Reduced zombies
- Reduced fluids
- More frequent growth

TEMPERATE Low temperature, high humidity

Systems about corpse in form of type of zombie in the cold climate. Depending on the season, most will move towards the more plant.

- Most zombies will be at the advanced stage within a month
- Lower blood flow in the region

TUNDRA Low temperature, low humidity

Other will often keep the dead fully frozen and may be dead with. As the time can see zombie change to a particularly cold and bloody state.

- Zombies may be frozen and not develop
- May be hard to decompose
