

Unified growth theory, Galor (2005)

- UGT tries to explain not only the modern rates of growth, but also the period of stagnation before the industrial revolution
- This period of stagnation is sometimes referred to as Malthusian stagnation
 - Malthus (1798): Long-run growth in living standards is impossible
 - Why? Higher living standards -> Higher population growth (from higher life expectancy and larger families) -> living standards fall because of fixed land supply
- However, an economy can escape from Malthusian stagnation if it does not rely on agriculture anymore: e.g., industrialization
- Model solved in class

Unified Growth Theory:

Unified Growth Theory Oded Galor, 2011-04-11 For most of the vast span of human history economic growth was all but nonexistent. Then about two centuries ago some nations began to emerge from this epoch of economic stagnation, experiencing sustained economic growth that led to significant increases in standards of living and profoundly altered the level and distribution of wealth, population, education, and health across the globe. The question ever since has been why. This is the first book to put forward a unified theory of economic growth that accounts for the entire growth process from the dawn of civilization to today. Oded Galor, who founded the field of unified growth theory, identifies the historical and prehistorical forces behind the differential transition timing from stagnation to growth and the emergence of income disparity around the world. Galor shows how the interaction between technological progress and population ultimately raised the importance of education in coping with the rapidly changing technological environment, brought about significant reduction in fertility rates, and enabled some economies to devote greater resources toward a steady increase in per capita income, paving the way for sustained economic growth. Presents a unified theory of economic growth from the dawn of civilization to today. Explains the worldwide disparities in living standards and population we see today. Provides a comprehensive overview of the three phases of the development process. Analyzes the Malthusian theory and its empirical support. Examines theories of demographic transition and their empirical significance. Explores the interaction between economic development and human evolution. *Evidence-based Unified Growth Theory* Ron W. Nielsen, 2018 From Stagnation to Growth Oded Galor, 2004 The Simplest Unified Growth Theory, 2007 This paper provides a unified growth theory, i.e., a model that explains the very long run economic and demographic development path of industrialized economies stretching from the pre-industrial era to present day and beyond. Making strict use of Malthus' 1798 so-called preventive check hypothesis that fertility rates vary inversely with the price of food, the current study offers a new and straightforward explanation for the demographic transition and the break with the Malthusian era. The current framework lends support to existing unified growth theories and is well in tune with historical evidence about structural transformation. Economic Growth, Population Growth, Structural Change, Industrial Revolution. *Multiple Growth Regimes* Oded Galor, 2007 Unified Growth theory Mia Thaning Olsen, 2012 **Classical Unified Growth Theory** Tim Lueger, 2019 **Birth, Death, and Development** Holger Strulik, Jacob Weisdorf, 2008 **From Malthus' Stagnation to Sustained Growth** Bruno Chiarini, Paolo Malanima, 2012-11-29 A detailed exploration of the influence and utility of Thomas Malthus' model of population growth and economic changes in Europe since the nineteenth century. Madsen, Holger Strulik, 2020 A core mechanism of unified growth theory is that accelerating technological progress induces mass education and in interaction with child quantity quality substitution a decline in fertility Using unique new data for 21 OECD countries over the period 1750-2000 we test for the first time the validity of this core mechanism of unified growth theory We measure a country's technological progress as patents per capita genetic distance weighted foreign patents and investment in machinery equipment and intellectual property products Controlling for other confounders like income mortality the gender wage gap indicators for child labor compulsory schooling and time and country fixed effects we establish a strong positive impact of technological progress on investments in education and a strongly negative one on fertility Using two stage regressions we assess the child quantity quality substitution that can be motivated by technological change We estimate that a 10 percent increase of enrollment in primary and secondary school is associated with a decline of the general fertility rate by 3 to 4 percent

The Economics of the Long Period Gregory Ponthiere, 2022-08-25 This book provides a non technical introduction to Unified Growth Theory UGT that is the study of history as a succession of economic regimes It first focuses on the canonical example of regime shift the transition from the regime of Malthusian stagnation to the modern regime of sustained economic growth Then it broadens the perspectives on historical change by examining other regime shifts involving institutional and environmental forces This book fills a gap in the market by providing a more accessible treatment of UGT and invites readers to explore ideas of continuity and discontinuity in history
