Campbell, Eugenio Roanes-Lozano, 2003-06-29 This book constitutes the thoroughly refereed post proceedings of the International Conference on Artificial Intelligence and Symbolic Computation AISC 2000 held in Madrid Spain in July 2000 The 17 revised full papers presented together with three invited papers were carefully reviewed and revised for inclusion in the book Among the topics addressed are automated theorem proving logical reasoning mathematical modeling of multi agent systems expert systems and machine learning computational mathematics engineering and industrial applications **Education and Technology for a Better World** Arthur Tatnall, Anthony Jones, 2009-07-14 Education and Technology for a Better World was the main theme for WCCE 2009 The conference highlights and explores different perspectives of this theme covering all levels of formal education as well as informal learning and societal aspects of education The conference was open to everyone involved in education and training Additionally players from technological societal business and political fields outside education were invited to make relevant contributions within the theme Education and Technology for a Better World For several years the WCCE World Conference on Computers in Education has brought benefits to the fields of computer science and computers and education as well as to their communities The contributions at WCCE include research projects and good practice presented in different formats from full papers to posters demonstrations panels workshops and symposiums The focus is not only on presentations of accepted contributions but also on discussions and input from all participants The main goal of these conferences is to provide a forum for the discussion of ideas in all areas of computer science and human learning They create a unique environment in which researchers and practitioners in the fields of computer science and human learning can interact exchanging theories experiments techniques applications and evaluations of initiatives supporting new developments that are potentially relevant for the development of these fields They intend to serve as reference guidelines for the research community **Psychology and Mathematics Education** Gila Hanna, Laura Macchi, Karin Binder, Laura Martignon, Katharina Loibl, 2023-09-05 Modern Mathematics is constructed rigorously through proofs based on truths which are either axioms or previously proven theorems Thus it is par excellence a model of rational inquiry Links between Cognitive Psychology and Mathematics Education have been particularly strong during the last decades Indeed the Enlightenment view of the rational human mind that reasons makes decisions and solves problems based on logic and probabilities was shaken during the second half of the twentieth century Cognitive psychologists discovered that humans thoughts and actions often deviate from rules imposed by strict normative theories of inference Yet these deviations should not be called errors as Cognitive Psychologists have demonstrated these deviations may be either valid heuristics that succeed in the environments in which humans have evolved or biases that are caused by a lack of adaptation to abstract information formats Humans as the cognitive psychologist and economist Herbert Simon claimed do not usually optimize but rather satisfice even when solving problem This Research Topic aims at demonstrating that these insights have had a

decisive impact on Mathematics Education We want to stress that we are concerned with the view of bounded rationality that is different from the one espoused by the heuristics and biases program In Simon s bounded rationality and its direct descendant ecological rationality rationality is understood in terms of cognitive success in the world correspondence rather than in terms of conformity to content free norms of coherence e g transitivity

Exploring Classical Greek Construction Problems with Interactive Geometry Software Ad Meskens,Paul

Tytgat,2017-02-02 In this book the classical Greek construction problems are explored in a didactical enquiry based fashion using Interactive Geometry Software IGS The book traces the history of these problems stating them in modern terminology By focusing on constructions and the use of IGS the reader is confronted with the same problems that ancient mathematicians once faced The reader can step into the footsteps of Euclid Vi te and Cusanus amongst others and then by experimenting and discovering geometric relationships far exceed their accomplishments Exploring these problems with the neusis method lets him discover a class of interesting curves By experimenting he will gain a deeper understanding of how mathematics is created More than 100 exercises guide him through methods which were developed to try and solve the problems The exercises are at the level of undergraduate students and only require knowledge of elementary Euclidean geometry and pre calculus algebra It is especially well suited for those students who are thinking of becoming a mathematics
