Threshold Concepts in Practice Ray Land, Jan H. F. Meyer, Michael T. Flanagan, 2016-07-09 *Threshold Concepts in Practice* brings together fifty researchers from sixteen countries and a wide variety of disciplines to analyse their teaching practice and the learning experiences of their students through the lens of the Threshold Concepts Framework In any discipline there are certain concepts the jewels in the curriculum whose acquisition is akin to passing through a portal Learners enter new conceptual and often affective territory Previously inaccessible ways of thinking or practising come into view without which they cannot progress and which offer a transformed internal view of subject landscape or even world view These conceptual gateways are integrative exposing the previously hidden interrelatedness of ideas and are irreversible However they frequently present troublesome knowledge and are often points at which students become stuck Difficulty in understanding may leave the learner in a liminal state of transition a betwixt and between space of knowing and not knowing where understanding can approximate to a form of mimicry Learners navigating such spaces report a sense of uncertainty ambiguity paradox anxiety even chaos The liminal space may equally be one of awe and wonderment Thresholds research identifies these spaces as key transformational points crucial to the learner's development but where they can oscillate and remain for considerable periods These spaces require not only conceptual but ontological and discursive shifts This volume the fourth in a tetralogy on Threshold Concepts discusses student experiences and the curriculum interventions of their teachers in a range of disciplines and professional practices including medicine law engineering architecture and military education Cover image Detail from Eve offering the apple to Adam in the Garden of Eden and the serpent c 1520 25 Lucas Cranach the Elder 1472 1553 Bridgeman Images All rights reserved

Socially Just Mining Jordan Aitken, Rita Armstrong, Vicki Bilro, Andy Fourie, Kylie Macpherson, 2022-05-31 In this book we consider ways in which mining companies do and can should respect the human rights of communities affected by mining operations We examine what can and should means and to whom in a variety of mostly Peruvian contexts and how engineers engage in normative practices that may interfere with the communities best interests We hope to raise awareness of the complexity of issues at stake and begin the necessary process of critique of self and of the industry in which an engineer chooses to work This book aims to alert engineering students to the price paid not only by vulnerable communities but also by the natural environment when mining companies engage in irresponsible and often illegal mining practices If mining is to be in our future and if we are to have a

future which is sustainable engineering students must learn to mine and support mining in new ways ways which are fairer more equitable and cleaner than today *Coaching and Mentoring in Higher Education* Jill Andreanoff,2017-09-16

Mentoring and coaching are becoming widely recognised as a means to promote student success retention and attainment Such programmes help students to transition into university life and achieve the best possible outcome from their experience For a mentoring or coaching scheme to benefit students however it s important to follow best practice This book will guide you through the crucial stages and possible pitfalls of setting up your own coaching or mentoring programme The first section outlines what these terms mean how they can be used and the attributes required to be a good coach or mentor The book goes on to guide you step by step through the processes of planning a programme recruiting coaches or mentors matching them to mentees and evaluating the end result The final chapters discuss more specialised programmes such as ementoring and using university mentors for school pupils **Teaching Engineering** Phillip C. Wankat, Frank S.

Oreovicz,2015 This book aims to cover all aspects of teaching engineering and other technical subjects It presents both practical matters and educational theories in a format that will be useful for both new and experienced teachers **Needs and Feasibility** Caroline Baillie, Eric Feinblatt, Timothy Thamae, Emily Berrington, 2022-05-31 Needs and Feasibility A Guide for Engineers in Community Projects The Case of Waste for Life is the story of Waste for Life WFL WFL is a not for profit organization that works to promote poverty reducing solutions to environmental problems and its educational branch is an international consortium of universities in six countries involving students in support of community development projects WFL currently works in Lesotho and Argentina We present the story of the development of WFL in each country as a case based guide to engineers professors and students interested in community development work particularly in contexts very different from their own We focus mainly on the set up stages framing the projects to ensure that community needs are adequately articulated and acted upon We begin with needs assessment what is it that needs to be done for whom and why How feasible is this technically economically and can we guarantee sustainability Before we can decide any of this we need to understand and map the territory who are the key players who have the most influence and who will be most impacted by what we are doing What is the role of the local government If the groups are working as cooperatives what does this mean and what are these groups looking for What is the technical solution going to look like If it is a product how will it be marketed What other social environmental and economic impacts will it have and on whom Once these have all been negotiated and it is clear that all parties are working towards a mutually acceptable goal how do we move forward so that any dependence on external partners is removed When do we bring students into the work What role can they play Should they stay at home and support the project from there or is it better to do work in the field This guide will be useful for the student engineer or the experienced engineer or professor who is interested in moving towards socially just engineering development work but has no idea where to begin The real difficulties and on the ground issues encountered by the Waste

for Life team are presented honestly and with the knowledge that we must learn from our mistakes Only then can we hope to gain a better understanding of our potential role in supporting community development and move towards a better future
