Ultrasonic and Advanced Methods for Nondestructive Testing and Material Characterization C. H. Chen, 2007
Ultrasonic methods have been very popular in nondestructive testing and characterization of materials. This book deals with both industrial ultrasound and medical ultrasound. The advantages of ultrasound include flexibility, low cost, in-line operation, and providing data in both signal and image formats for further analysis. The book devotes 11 chapters to ultrasonic methods. However, ultrasonic methods can be much less effective with some applications. So the book also has 14 chapters catering to other or advanced methods for nondestructive testing or material characterization. Topics like structural health monitoring, Terahertz methods, X-ray, and thermography methods are presented. Besides different sensors for nondestructive testing, the book places much emphasis on signal image processing and pattern recognition of the signals acquired. **Hawkins**

Thermo-Hydro-Mechanical-Chemical Processes in Fractured Porous Media: Modelling and Benchmarking Olaf Kolditz, Thomas Nagel, Hua Shao, Wenqing Wang, Sebastian Bauer, 2018-03-01 The book comprises the 3rd collection of benchmarks and examples for porous and fractured media mechanics. Analysis of thermo-hydro-mechanical-chemical (THMC) processes is essential to a wide area of applications in environmental engineering, such as geological waste deposition, geothermal energy utilization, shallow and deep systems, carbon capture and storage (CCS), as well as water resources management and hydrology. In order to assess the feasibility, safety, as well as sustainability of geo-environmental applications, model-based simulation is the only way to quantify future scenarios. This charges a huge responsibility concerning the

reliability of conceptual models and computational tools Benchmarking is an appropriate methodology to verify the quality and validate the concept of models based on best practices Moreover benchmarking and code comparison are building strong community links The 3rd THMC benchmark book also introduces benchmark based tutorials therefore the subtitle is selected as From Benchmarking to Tutoring The benchmark book is part of the OpenGeoSys initiative an open source project to share knowledge and experience in environmental analysis and scientific computation The new version of OGS 6 is introduced and first benchmarks are presented therein see appendices

view of the close relations between the properties of surface and matter which is a cornerstone of most of studies of materials. The novelty of the approach developed in Laser Surface Interactions is related with the interconnection of scientific studies with numerous applications of the laser surface interactions separated in different chapters by the ranges of laser intensities. We present most recent achievements in this field. The book provides valuable information for different ranges of reader's preparedness to the laser related topics from unprepared readers to students, engineers and researchers, professionals and academics.
