Resources Use Efficiency in Agriculture Sandeep Kumar, Ram Swaroop Meena, Manoj Kumar Jhariya, 2020-09-18. Achieving zero hunger and food security is a top priority in the United Nations Development Goals (UNDGs). In an era characterized by high population growth and increasing pressure on agricultural systems, efficiency in the use of natural resources has become central to sustainable agricultural practices. Fundamentally speaking, eco-efficiency is about maximizing agricultural outputs in terms of quantity and quality using less land, water, nutrients, energy, labor, or capital. The concept of eco-efficiency involves both the ecological and economic aspects of sustainable agriculture. It is therefore essential to understand the interaction of ecosystem constituents within the extensive agricultural landscape as well as farmers' economic needs. This book examines the latest eco-efficient practices used in agro systems. Drawing upon research and examples from around the world, it offers an up-to-date overview together with insights into directly applicable approaches for poly-cropping systems and landscape-scale management to improve the stability of agricultural production systems, helping achieve food security. The book will be of interest to educators, researchers, climate change scientists, capacity builders, and policymakers alike. It can also be used as additional reading material for undergraduate and graduate courses on agriculture, forestry, soil science, and the environmental sciences.

It also highlights the safety aspects and risk assessment and management related to several toxins as well as nanotechnology-related solutions for these challenges. The book also discusses new nanomaterials from the nexus of environment, water, remediation, and total environment.

The Social (Re)Production of Architecture Doina Petrescu, Kim Trogal, 2017-07-14. The Social Re-Production of Architecture brings the debates of the right to the city into today's context of ecological, economic, and social crises. Building on the 1970s discussions about the production of space, which French sociologist Henri Lefebvre considered a civic right, the authors question who has the right to make space and explore the kinds of relations that are produced in the process. In the emerging post-capitalist era, this book addresses urgent social and ecological imperatives for change and opens up questions around architecture's engagement with new forms of organization and practice. The book asks what new kinds of social can architecture re-produce and what kinds of politics, values, and actions are needed. The book features 24 interdisciplinary essays written by leading theorists and practitioners, including social thinkers, economic theorists, architects, educators, urban curators, feminists, artists, and activists from different generations and global contexts. The essays discuss the

diverse global locations with work taking different and specific forms in these different contexts A cutting edge critical text which rethinks both practice and theory in the light of recent crises making it key reading for students academics and practitioners
