L Douglas Ried PhD FAPhA Editor in Chief Emeritus Journal of the American

Pharmacists Association Professor and Associate Dean for Academic Affairs College of Pharmacy University of Texas at Tyler
Tyler Texas The SAGE Encyclopedia of Social Science Research Methods Michael Lewis-Beck, Alan E Bryman, Tim Futing Liao, 2004

Appreciative users of this volume will be students faculty and researchers in academic special and large public libraries for whom it is recommended Library Journal

The compilers of this impressive unique work claim it brings together in one place authoritative essays on virtually all social science methods topics both quantitative and qualitative a claim examination supports

More than 400 contributors from the US and abroad present approximately 1 000 comprehensive in depth well referenced entries that vary in length from 50 to 2 500 words

The attractively designed and produced volumes 1 351 total pages consist of easily legible text and figures the front matter occupying 46 pages and the index 40

This defining work will be valuable to readers and researchers in social sciences and humanities at all academic levels

As a teaching resource it will be useful to instructors and students alike and will become a standard reference source

Essential for general and academic collections

Choice SAGE Reference is proud to announce The SAGE Encyclopedia of Social Science Research Methods a three volume resource that is a first of its kind developed by the leading publisher of social science research methods books and journals

This unique multi volume reference set offers readers an all encompassing education in the ways of social science researchers

Written to be accessible to general readers entries do not require any advanced knowledge or experience to understand the purposes and basic principles of any of the methods

The Encyclopedia features two major types of entries definitions consisting of a paragraph or two which provide a quick explanation of a methodological term and topical treatments or essays discussing the nature history application example and implication of using a certain method

Also included are suggested readings and references for future study

To help provide a more complete explanation than is often achieved within the scope of a single article key terms and concepts appear in small capital letters to refer readers to related terms explained elsewhere

In addition to epistemological issues that influence the nature of research questions and assumptions The SAGE Encyclopedia of Social Science Research Methods tackles topics not normally viewed as part of social science research methodology from philosophical issues such as poststructuralism to advanced statistical techniques

In covering the full range of qualitative and quantitative data analyses this key reference offers an integrated approach that allows the reader to choose the most appropriate and robust techniques to apply to each situation

Many entries treat traditional topics in a novel way stimulating both interest and new perspectives

One example is the entry Econometrics by Professor Damodar Gujarati

Following a process which many educators preach but seldom practice Gujarati walks the reader twice through the research process from economic theory to data and models to analysis once in principle and a second time with an example

In using the ordinary process of economic research to achieve an extraordinary impact he leaves the reader thinking not only about methods and models but also the fundamental purpose of econometrics

Topics Covered Analysis of Variance Association and Correlation Basic Qualitative Research Basic Statistics Causal Modeling Structural Equations

Discourse Conversation Analysis Econometrics Epistemology Ethnography Evaluation Event History Analysis Experimental Design Factor Analysis and Related Techniques Feminist Methodology Generalized Linear Models Historical Comparative Interviewing in Qualitative Research Latent Variable Model Life History Biography Loglinear Models Categorical Dependent Variables Longitudinal Analysis Mathematics and Formal Models Measurement Level Measurement Testing and Classification Multiple Regression Multilevel Analysis Qualitative Data Analysis Sampling in Surveys Sampling in Qualitative Research Scaling Significance Testing Simple Regression Survey Design Time Series Key Features Over 900 entries arranged A to Z Each entry is written by a leading authority in the field covering both quantitative and qualitative methods Covers all disciplines within the social sciences Contains both concise definitions and in depth essays Three volumes and more than 1500 pages *Using Econometrics* A.
