Synthesis and Applications of Biopolymer Composites

Ana María Díez-Pascual, Patrizia Cinelli, 2019-07-23 This book as a collection of 17 research articles provides a selection of the most recent advances in the synthesis characterization and applications of environmentally friendly and biodegradable biopolymer composites and nanocomposites Recently the demand has been growing for a clean and pollution free environment and an evident target regarding the minimization of fossil fuel usage Therefore much attention has been focused on research to replace petroleum based commodity plastics by biodegradable materials arising from biological and renewable resources Biopolymers polymers produced from natural sources either chemically from a biological material or biosynthesized by living organisms are suitable alternatives for addressing these issues due to their outstanding properties including good barrier performance biodegradation ability and low weight However they generally possess poor mechanical properties a short fatigue life low chemical resistance poor long term durability and limited processing capability In order to overcome these deficiencies biopolymers can be reinforced with fillers or nanofillers with at least one of their dimensions in the nanometer range Bionanocomposites are advantageous for a wide range of applications such as in medicine pharmaceuticals cosmetics food packaging agriculture forestry electronics transport construction and many more
