

Troubleshooting Steps For Common TV Problems

Updated Aug 23, 2021 at 01:52 pm

By Nicholas D'Souza

Having a TV that doesn't display what you want can be frustrating. There are many different reasons why your TV might not be working properly or why the image doesn't look right. Below are some of the most common issues with TVs we're asked about, even though troubleshooting your TV is on a case-by-case basis, hopefully this will help you.

Of course, the first step to any technology-related problem is to check if all components are properly plugged in. Check your HDMI connections, and if possible, unplug and plug them in again. If that doesn't fix anything, find your related issue below. Once you fix it, there's no need to do anything else.

Inputs

TV not displaying the image

- For starters, make sure the input on the TV is set to the input your device is plugged into.
- Verify that the input is put in properly.
- Change HDMI cables.
- Enable the highest bandwidth setting on the TV. TVs will have settings for 'HDMI Mode', or something similar, where you can choose between '1.4', '2.0', or '2.1', or have other settings called 'Full Color' on Vizio and 'HDMI Ultra Deep Color' on LG. This represents the TV's bandwidth; an [HDMI 2.1](#) source won't display properly if you set the TV to '1.4', as you'll be limited in the resolution and frame rate. You should always enable the necessary bandwidth because even setting it higher than needed can cause compatibility issues.
