Over many centuries chemists and their alchemical predecessors evolved a sophisticated array of concepts and methods that yield reliable understanding when applied to systems of complexity intermediate between those generally considered by physicists at one extreme and biologists at the other Chemical problems can be chosen so that quantitative modelling can be used fruitfully while also displaying some of the intriguing features typical of more complex cases Papers in this volume address relations between macroscopic and microscopic description essential roles of visualization and representation in chemical understanding historical questions involving chemical concepts impacts of chemical ideas on wider cultural concerns and relationships between contemporary chemistry and other sciences The authors demonstrate assert or tacitly assume that chemical explanation is functionally autonomous This volume should be of interest not only to professional chemists and philosophers but also to workers in medicine psychology and other fields in which relationships between explanations based on diverse levels of description and investigation are important
