Christopher Phillips, Andrew Toms, 2018-08-28 This book collects the notes of the lectures given at an Advanced Course on Dynamical Systems at the Centre de Recerca Matem tica CRM in Barcelona The notes consist of four series of lectures The first one given by Andrew Toms presents the basic properties of the Cuntz semigroup and its role in the classification program of simple nuclear separable C^* algebras The second series of lectures delivered by N Christopher Phillips serves as an introduction to group actions on C^* algebras and their crossed products with emphasis on the simple case and when the crossed products are classifiable The third one given by David Kerr treats various developments related to measure theoretic and topological aspects of crossed products focusing on internal and external approximation concepts both for groups and C^* algebras Finally the last series of lectures delivered by Thierry Giordano is devoted to the theory of topological orbit equivalence with particular attention to the classification of minimal actions by finitely generated abelian groups on the Cantor set *The Economist* , 1905 **Mereology and the Sciences** Claudio Calosi, Pierluigi Graziani, 2014-06-02 This volume is the first systematic and thorough attempt to investigate the relation and the possible applications of mereology to contemporary science It gathers contributions from leading scholars in the field and covers a wide range of scientific theories and practices such as physics mathematics chemistry biology computer science and engineering Throughout the volume a variety of foundational issues are investigated both from the formal and the empirical point of view The first section looks at the topic as it applies to physics The section addresses questions of persistence and composition within quantum and relativistic physics and concludes by scrutinizing the possibility to capture continuity of motion as described by our best physical theories within gunky space times The second part tackles mathematics and shows how to provide a foundation for point free geometry of space switching to fuzzy logic The relation between mereological sums and set theoretic suprema is investigated and issues about different mereological perspectives such as classical and natural Mereology are thoroughly discussed The third section in the volume looks at natural science Several questions from biology medicine and chemistry are investigated From the perspective of biology

there is an attempt to provide axioms for inferring statements about part hood between two biological entities from statements about their spatial relation From the perspective of chemistry it is argued that classical mereological frameworks are not adequate to capture the practices of chemistry in that they consider neither temporal nor modal parameters The final part introduces computer science and engineering A new formal mereological framework in which an indeterminate relation of part hood is taken as a primitive notion is constructed and then applied to a wide variety of disciplines from robotics to knowledge engineering A formal framework for discretetopology and its applications is developed and finally the importance of mereology for the relatively new science of domain engineering is also discussed
