

17. **Global Energy Balance:** See [Introduction: Understanding Green Warming and Climate](#), 2007b.

The figure below is a schematic diagram of the world as radiative equilibrium with its surroundings according to atmospheric radiation equilibrium. Radiation equilibrium requires that the net-radiation power-energy absorbed by the surface must equal the rate of radiative energy-mass loss-mass-loss. The incident solar radiation is 3.400 W/m^2 (1/4 of the total-solar-constant 1360 W/m^2), ϵ is the surface of the earth (surface) and τ is the planetary albedo (0.30). The globally-averaged temperature only radiates as a uniform heat-loss space without being absorbed.

- a) What is the globally-averaged energy-balance equation according to radiation equilibrium as stated above? Solve for the global temperature, T , and show that it is equal to 255 K (18°C).

Solution:

Energy Balance:

"Rate of Solar Energy Absorbed" = "Rate of Thermal Energy Emitted"

$$\frac{3.400 \text{ W/m}^2 \times \pi R^2 \times (1 - \tau)}{4} = \frac{\epsilon \times \sigma \times 4\pi R^2 \times T^4}{4}$$

$$T = \left(\frac{3.400 \text{ W/m}^2 \times (1 - \tau)}{4 \times \epsilon \times \sigma} \right)^{1/4} = \left(\frac{3.400 \text{ W/m}^2 \times (1 - 0.30)}{4 \times 5.67 \times 10^{-8} \text{ W/m}^2 \times \text{K}^4} \right)^{1/4} = 255 \text{ K} \text{ (18°C)}$$

As noted for the global average surface temperature (T) assuming that the surface radiates uniformly as a black body. In this case, the Stefan-Boltzmann's law for a blackbody is $\epsilon \times \sigma \times T^4$, where the Stefan-Boltzmann's constant is $5.67 \times 10^{-8} \text{ W/m}^2 \times \text{K}^4$ and T is absolute temperature (K). Compare this temperature with the observed global average surface temperature of 288 K. Explain possible reasons for the difference.

Solution:

Global Average Surface Temperature:

$$T = \left(\frac{\epsilon \times \sigma \times T^4}{\epsilon \times \sigma} \right)^{1/4} = \left(\frac{5.67 \times 10^{-8} \text{ W/m}^2 \times \text{K}^4}{5.67 \times 10^{-8} \text{ W/m}^2 \times \text{K}^4} \right)^{1/4} = 288 \text{ K}$$

Wallace And Hobbs Solutions:

Atmospheric Science John M. Wallace, Peter V. Hobbs, 2006-03-24 Atmospheric Science Second Edition is the long awaited update of the classic atmospheric science text which helped define the field nearly 30 years ago and has served as the cornerstone for most university curricula. Now students and professionals alike can use this updated classic to understand atmospheric phenomena in the context of the latest discoveries and prepare themselves for more advanced study and real life problem solving. This latest edition of Atmospheric Science has been revamped in terms of content and appearance. It contains new chapters on atmospheric chemistry, the Earth system, the atmospheric boundary layer, and climate, as well as enhanced treatment of atmospheric dynamics, radiative transfer, severe storms, and global warming. The authors illustrate concepts with full color state of the art imagery and cover a vast amount of new information in the field. Extensive numerical and qualitative exercises help students apply basic physical principles to atmospheric problems. There are also biographical footnotes summarizing the work of key scientists, along with a student companion website that hosts climate data, answers to quantitative exercises, full solutions to selected exercises, skew T log p chart related links, appendices, and more. The instructor website features instructor's guide, solutions to quantitative exercises, electronic figures from the book, plus supplementary images for use in classroom presentations. Meteorology students at both advanced undergraduate and graduate levels will find this book extremely useful. Full color satellite imagery and cloud photographs illustrate principles throughout. Extensive numerical and qualitative exercises emphasize the application of basic physical principles to problems in the atmospheric sciences. Biographical footnotes summarize the lives and work of scientists mentioned in the text and provide students with a sense of the long history of meteorology. Companion website encourages more advanced exploration of text topics, supplementary information, images, and bonus exercises.

The Weather and Climate of Australia and New Zealand Andrew P. Sturman, Nigel J. Tapper, 2006. Comprehensively updated in its 2nd edition, *The Weather and Climate in Australia and New Zealand* provides an introduction to the basic concepts underlying the science of the atmosphere from a Southern Hemisphere perspective and establishes the global setting within which the weather and climate of Australia and New Zealand operate. The book introduces the basic science of the atmosphere, including its physical structure and composition, and the planetary circulation that lays the foundation for Australian weather and climate. The next section describes the characteristics of air masses and atmospheric motion, explains the interactions that produce mid latitude and tropical weather systems, and discusses weather forecasting in this region. The book then focuses on selected aspects of the mesoscale, regional, and local weather systems, and on climate patterns commonly observed across urban and rural areas of Australia and New Zealand. Finally, past climate change, contemporary variability, and future scenarios are examined, and the possible links between human activity and climate variability are outlined, with particular emphasis on this region. New to this edition is the significant expansion of detail in chapter 4. Further explanation is given of atmospheric humidity and

atmospheric stability including more detail on the stability of layers of air Extra material on orographic rainfall and some technical aspects such as the adjustment of station level pressure measurement to sea level is also included All other chapters have been updated with new material from recent research

Planetary Volcanism across the Solar System Tracy K. P. Gregg, Rosaly M.C. Lopes, Sarah A. Fagents, 2021-12-04 Planetary Volcanism across the Solar System compares and contrasts the vast array of planetary bodies in the Solar System including Earth The wealth of spacecraft data for almost all major solid surface bodies in the Solar System indicate that volcanism has been a dominant mechanism in shaping the landscapes of these bodies The book addresses key questions surrounding our understanding of planetary volcanism such as how to integrate the data into a coherent view of how volcanic activity arises how this mechanism shapes planets which volcanic landforms are ubiquitous throughout the Solar System and which are unique By placing a singular emphasis on comparing volcanic processes and landforms on all relevant Solar System bodies and with the explicit objective of providing a systems level understanding of this widespread phenomenon users will find an up to date accessible and comprehensive discussion of the major volcanic processes and landforms that shape and drive the evolution of planets moons and smaller bodies Includes an introduction placing the book in the context of the larger Comparative Planetology series Compares volcanic processes and landforms on all relevant Solar System bodies providing a systems level understanding of this widespread phenomenon Offers a thorough examination of the major volcanic processes and landforms that shape and drive the evolution of planets moons and smaller bodies Includes information from new mission data and discoveries in recent years Features over 100 color illustrations and charts to more clearly convey concepts Offers additional online content including figures animations video and other multimedia content such as interviews with contributing authors

Handbook of Weather, Climate, and Water Thomas D. Potter, Bradley R. Colman, 2003-08-11 This comprehensive two volume review of the atmospheric and hydrologic sciences promises to be the definitive reference for both professionals and laypersons for years to come Volume I addresses atmospheric dynamics physical meteorology weather systems and measurements while Volume II contains information on the climate system atmospheric chemistry hydrology and societal impacts

Decision Support for Forest Management Annika Kangas, Mikko Kurttila, Teppo Hujala, Kyle Eyvindson, Jyrki Kangas, 2015-10-27 This updated and expanded second edition adds the most recent advances in participatory planning approaches and methods giving special emphasis to decision support tools usable under uncertainty The new edition places emphasis on the selection of criteria and creating alternatives in practical multi criteria decision making problems

Fundamentals of Physics and Chemistry of the Atmosphere Guido Visconti, 2016-06-01 This book is an introductory course to the physics and chemistry of the atmosphere and to climate dynamics It covers the basics in thermodynamics fluid dynamics radiation and chemistry and explains the most intriguing problems that currently exist in the study of the atmospheres of the Earth and planets A particular effort is made to approach the different topics intuitively Among the themes covered are the most recent evolution

concerning the chemistry of polluted troposphere the global warming problem and chaos and nonlinear theory The book is almost completely rewritten in comparison to the previous edition with a more logical organization of the chapters The fundamentals of thermodynamics radiation fluid dynamics and chemistry are introduced in the first six chapters including a new chapter on remote sensing Also there is an additional chapter on geoengineering A significant addition to the new edition at the end of each chapter are examples where the topics introduced in the chapter are further discussed with application to classical problems or new research items Many of these examples are accompanied by computer programs The most important updates deal with the theory of the general circulation the methods to evaluate GCM the detailed discussion of the urban troposphere and the chaos and nonlinear phenomena *Radioactive Waste Management* ,1981 **Urban**
Climates T. R. Oke,G. Mills,A. Christen,J. A. Voogt,2017-09-14 The first full synthesis of modern scientific and applied research on urban climates suitable for students and researchers alike *Energy Research Abstracts* ,1992 Official
