This book is designed to address the lack of proper resources available for individuals interested in transitioning into a data scientist role in cybersecurity. It concludes with case studies, interview questions, and blueprints for four projects that you can use to enhance your portfolio. By the end of this book, you will be able to apply machine learning algorithms to detect malware, fake news, deep fakes, and more, along with implementing privacy-preserving machine learning techniques such as differentially private ML. What you will learn: Use GNNs to build feature-rich graphs for bot detection and engineer graph-powered embeddings and features. Discover how to apply ML techniques in the cybersecurity domain. Apply state-of-the-art algorithms such as transformers and GNNs to solve security-related issues. Leverage ML to solve modern security issues such as deep fake detection, machine-generated text identification, and stylometric analysis. Apply privacy-preserving ML techniques and use differential privacy to protect user data while training ML models. Build your own portfolio with end-to-end ML projects for cybersecurity. Who this book is for: This book is for machine learning practitioners interested in applying their skills to solve cybersecurity issues. Cybersecurity workers looking to leverage ML methods will also find this book useful. An understanding of the fundamental machine learning concepts and beginner-level knowledge of Python programming are needed to grasp the concepts in this book. Whether you're a beginner or an experienced professional, this book offers a unique and valuable learning experience that will help you develop the skills needed to protect your network and data against the ever-evolving threat landscape.

Machine Learning and Data Science Blueprints for Finance Hariom Tatsat, Sahil Puri, Brad Lookabaugh, 2020-10-01. Over the next few decades, machine learning and data science will transform the finance industry. With this practical book, analysts, traders, researchers, and developers will learn how to build machine learning algorithms crucial to the industry. You will examine ML concepts and over 20 case studies in supervised, unsupervised, and reinforcement learning, along with natural language processing (NLP). Ideal for professionals working at hedge funds, investment and retail banks, and fintech firms, this book also delves deep into portfolio management, algorithmic trading, derivative pricing, fraud detection, asset price prediction, sentiment analysis, and chatbot development. You will explore real-life problems faced by practitioners and learn scientifically sound solutions supported by code and examples. This book covers supervised learning regression-based models for trading strategies, derivative pricing, and portfolio management; supervised learning classification-based models for credit default risk prediction, fraud detection, and trading strategies; dimensionality reduction techniques with case studies in portfolio management, trading strategy, and yield curve construction; algorithms and clustering techniques for finding similar objects with case studies in trading strategies and portfolio management; reinforcement learning models and techniques used for building trading strategies, derivatives hedging, and portfolio management; NLP techniques using Python libraries such as NLTK and scikit-learn for transforming text into meaningful representations.
