Chromatographic Analysis of Pharmaceuticals John A. Adamovics,1990

Multidimensional HPLC of Polymers Harald Pasch,Bernd Trathnigg,2013-06-12 This book presents the principle ideas of combining different analytical techniques in multi dimensional analysis schemes It reviews the basic principles and instrumentation of multi dimensional chromatography and the hyphenation of liquid chromatography with selective spectroscopic detectors and presents experimental protocols for the analysis of complex polymers It is the consequent continuation of HPLC of Polymers from 1999 by the same authors Like its predecessor this book discusses the theoretical background equipment experimental procedures and applications for each separation technique but in contrast treats multi dimensional and coupled techniques Multidimensional HPLC of Polymers intends to review the state of the art in polymer chromatography and to summarize the developments in the field during the last 15 years With its tutorial and laboratory manual style it is written for beginners as well as for experienced chromatographers and will enable its readers polymer chemists physicists and material scientists as well as students of polymer and analytical sciences to optimize the experimental conditions for their specific separation problems

Advances in Lipid Methodology R O Adlof,2003-10-01

The fifth volume in the Advances in lipid methodology series is the first with new editor Richard O Adlof but its objectives are still those of the previous editor William W Christie To provide readable up to date reviews of rapidly expanding areas of lipid analysis and practical examples which should be of immediate use to lipid analysts As in the previous volumes of Advances in lipid methodology the editor has chosen leading international experts to write individual chapters Volume 5 contains four chapters on specific methodologies of lipid analysis and three which describe specific applications or standardization of methods The methodologies are different scanning calorimetry for the study of physical properties of fats and oils silver ion chromatography atmospheric pressure chemical ionization mass spectrometry APCI MS and supercritical fluid

chromatography SFC Chapters on specific applications cover the analysis of genetically modified oils and the use of fatty acid profiling in the characterization of metabolic diseases A further chapter provides an overview of the official standard methods used for fats and oils analysis and gives extensive listings of information on standards organizations Thin Layer Chromatography in Drug Analysis Lukasz Komsta, Monika Waksmundzka-Hajnos, Joseph Sherma, 2013-12-20 Used routinely in drug control laboratories forensic laboratories and as a research tool thin layer chromatography TLC plays an important role in pharmaceutical drug analyses It requires less complicated or expensive equipment than other techniques and has the ability to be performed under field conditions Filling the need for an up to date Benzodiazepines II Harald Schütz, 2012-12-06 this is an excellent compilation of data which should be on the bookshelves of all analysts interested in the benzodiazepines It is to be hoped that with the introduction of so many new benzodiazepines the author will quickly add these in a second edition A C Moffat in Trends in Analytical Chemistry 1983 This review deputizing for many others reflects the friendly reception enjoyed by the first volume of Benzodiazepines which was published in 1982 and apparently closed a gap in the benzodiazepine literature In the meantime Benzodiazepines has established itself as a standard book as evidenced by numerous letters and quotations Suggestions were also soon made for a new edition in view of the unusually rapid development in the field of the benzodiazepines It became quickly obvious however that it would not be sufficient to publish a revised second edition but that a completely new second volume would be required for which however the successful previous format could be largely retained The following considerations seem worth mentioning in connection with the preparation of Volume II To ensure continuity with Volume I as far as possible the list of references was consecutively numbered references 1 to 3779 in Volume I references 3780 to 11338 in Volume II Whereas in Vol I the substances appear in the sequential order of their historical development they are listed in alphabetical order in Vol II
