vital for understanding law Tackling questions of method key themes and concepts and a variety of genres and areas of the law this collection of essays by leading scholars from a variety of disciplines illuminates new questions and articulates an exciting new agenda for scholarship in law and humanities

The Material Image Donald H. Wacome, 2020-09-29 In *The Material Image* Donald H. Wacome sets out to reconcile the Christian faith and contemporary science by embracing rather than evading its naturalistic implications The sciences are our best way to know ourselves and the world we inhabit Wacome argues but this does not make belief in miracles unreasonable The sciences reveal that we are fully material beings the product of unguided natural selection God created human persons for the vocation of sharing in the everlasting Triune life and work but this creation does not involve design The mind is the embodied socially situated brain There is no immaterial soul we are the material image of our transcendent Creator This materialist conception does not preclude the resurrection of the body The freedom that matters for the human creature is compatible with our being governed by the laws of nature Morality and religion are natural merely human legacies of our evolutionary history which God employs in pursuit of fellowship with us Christians can faithfully and enthusiastically welcome the image of human beings given in contemporary science

The Philosophy of Metacognition Joëlle Proust, 2013-11-28 Does metacognition i.e. the capacity to form epistemic self evaluations about one's current cognitive performance derive from a mindreading capacity or does it rely at least in part on sui generis informational processes In *The Philosophy of Metacognition* Joëlle Proust provides a powerful defense of the second position Drawing on discussions of empirical evidence from comparative developmental and experimental psychology as well as from neuroscience and on conceptual analyses she purports to show that in contrast with analytic metacognition procedural metacognition does not need to involve metarepresentations Procedural metacognition seems to be available to some non humans some primates and rodents Proust further claims that metacognition is essentially related to mental agency i.e. cognitive control and monitoring Self probing is equivalent to a self addressed question about the feasibility of a mental action Am I able to remember this word Post evaluating is a way of asking oneself whether a given mental action has been successfully completed Is this word the one I was looking for Neither question need be articulated conceptually for a feeling of knowing or of being right to be generated or to drive epistemic control Various issues raised by the contrast of a procedural experience based metacognition with an analytic concept based metacognition are explored such as whether each is expressed in a different representational format their sensitivity to different epistemic norms and the existence of a variety of types of epistemic acceptance

Classification in the Wild Konstantinos V. Katsikopoulos, Ozgur Simsek, Marcus Buckmann, Gerd Gigerenzer, 2021-02-02 Rules for building formal models that use fast and frugal heuristics extending the psychological study of classification to the real world of uncertainty This book focuses on classification allocating objects into categories in the wild in real world situations and far from the certainty of the lab In the wild unlike in typical psychological experiments the future is not knowable and uncertainty cannot be meaningfully reduced to probability Connecting the

science of heuristics with machine learning the book shows how to create formal models using classification rules that are simple fast and transparent and that can be as accurate as mathematically sophisticated algorithms developed for machine learning

Seeing the Future Kourken Michaelian, Stanley B. Klein, Karl K. Szpunar, 2016 Episodic memory is a major area of research in psychology Initially viewed as a distinct store of information derived from experienced episodes episodic memory is understood today as a form of mental time travel into the personal past Recent research has revealed striking similarities between episodic memory past oriented mental time travel and future oriented mental time travel FMTT Seeing the Future Theoretical Perspectives on Future Oriented Mental Time Travel brings together leading contributors in both empirical and theoretical disciplines to present the first interdisciplinary look at the human ability to imagine future scenarios Chapters focus on the challenging conceptual and theoretical questions raised by FMTT covering themes such as varieties of future oriented cognition relationships between FMTT and episodic memory subjective temporality in FMTT the self in FMTT and functional evolutionary and comparative developmental and clinical perspectives on FMTT With its focus on the conceptual issues at the heart of fast developing research on FMTT this edited volume will serve graduate students to senior scholars working on or interested in FMTT and related areas as a synthesis of current theoretical thinking and a source of questions for future FMTT research

The World at Our Fingertips Frédérique de Vignemont de Vignemont, Andrea Serino, Hong Yu Wong, Alessandro Farnè, 2021-04-01 What difference is there between the visual experience of watching the moon in the sky and the visual experience of seeing a snake slither by your foot It is easy to believe our interpretation of the world is split into a binary mode between the bodily self and everything outside it There is however a buffer zone in the immediate surrounding of the body known as peripersonal space in which boundaries are blurred The notion of peripersonal space calls into question not only our entrenched theories of perception but also has major implications on the way we perceive personal and social awareness Research has yielded a vast array of exciting discoveries on peripersonal space across a variety of disciplines ethology social psychology anthropology neurology psychiatry and cognitive neuroscience The World at Our Fingertips A Multidisciplinary Exploration of Peripersonal Space brings these perspectives together for the first time as well as introducing a philosophical dialogue to the questions Edited by a team of leading psychologists and philosophers in the fields of peripersonal space and bodily awareness this comprehensive volume presents the reader with a fresh accessible dialogue between authorities from vastly different areas of thought

Information Technology and Military Power Jon R. Lindsay, 2020-07-15 Militaries with state of the art information technology sometimes bog down in confusing conflicts To understand why it is important to understand the micro foundations of military power in the information age and this is

exactly what Jon R Lindsay's *Information Technology and Military Power* gives us. As Lindsay shows, digital systems now mediate almost every effort to gather, store, display, analyze, and communicate information in military organizations. He highlights how personnel now struggle with their own information systems as much as with the enemy. Throughout this foray into networked technology in military operations, we see how information practice—the ways in which practitioners use technology in actual operations—shapes the effectiveness of military performance. The quality of information practice depends on the interaction between strategic problems and organizational solutions. *Information Technology and Military Power* explores information practice through a series of detailed historical cases and ethnographic studies of military organizations at war. Lindsay explains why the US military, despite all its technological advantages, has struggled for so long in unconventional conflicts against weaker adversaries. This same perspective suggests that the US retains important advantages against advanced competitors like China that are less prepared to cope with the complexity of information systems in wartime. Lindsay argues convincingly that a better understanding of how personnel actually use technology can inform the design of command and control, improve the net assessment of military power, and promote reforms to improve military performance. Warfighting problems and technical solutions keep on changing, but information practice is always stuck in between.

Evolutionary Criminology Russell Durrant, Tony Ward, 2015-03-12

In our attempts to understand crime, researchers typically focus on proximate factors such as the psychology of offenders, their developmental history, and the social structure in which they are embedded. While these factors are important, they don't tell the whole story. *Evolutionary Criminology: Towards a Comprehensive Explanation of Crime* explores how evolutionary biology adds to our understanding of why crime is committed, by whom, and our response to norm violations. This understanding is important both for a better understanding of what precipitates crime and to guide approaches for effectively managing criminal behavior. This book is divided into three parts. Part I reviews evolutionary biology concepts important for understanding human behavior, including crime. Part II focuses on theoretical approaches to explaining crime, including the evolution of cooperation and the evolutionary history and function of violent crime, drug use, property offending, and white collar crime. The developmental origins of criminal behavior are described to account for the increase in offending during adolescence and early adulthood, as well as to explain why some offenders are more likely to desist than others. Proximal causes of crime are examined, as well as cultural and structural processes influencing crime. Part III considers human motivation to punish norm violators and what this means for the development of a criminal justice system. This section also considers how an evolutionary approach contributes to our understanding of crime prevention and reduction. The section closes with an evolutionary approach to understanding offender rehabilitation and reintegration. Reviews how evolutionary findings improve our understanding of crime and punishment. Examines motivations to offend and to punish norm violators. Articulates evolutionary explanations for adolescent crime increase. Identifies how this knowledge can aid in crime prevention and reduction and in offender

Handbook of Cognitive Archaeology Tracy B. Henley, Matt J. Rossano, Edward P. Kardas, 2019-07-24 The remains that archaeologists uncover reveal ancient minds at work as much as ancient hands and for decades many have sought a better way of understanding those minds This understanding is at the forefront of cognitive archaeology a discipline that believes that a greater application of psychological theory to archaeology will further our understanding of the evolution of the human mind Bringing together a diverse range of experts including archaeologists psychologists anthropologists biologists psychiatrists neuroscientists historians and philosophers in one comprehensive volume this accessible and illuminating book is an important resource for students and researchers exploring how the application of cognitive archaeology can significantly and meaningfully deepen their knowledge of early and ancient humans This seminal volume opens the field of cognitive archaeology to scholars across the behavioral sciences

Naturalized Epistemology and Philosophy of Science Chienkuo Mi, Ruey-lin Chen, 2007 Much has happened in the field of contemporary epistemology since Quine's Epistemology Naturalized was published in 1969 Even before Ronald Giere published his article Philosophy of Science Naturalized naturalized philosophy of science had been influenced by the so called historical approach Kuhn Lakatos Feyerabend and Laudan all contributed importantly to this trend In this light it has emerged without a doubt that philosophy of science is closely related to epistemology This volume explores some of the

relevant relations and will be of interest to epistemologist and philosophers of science **Social Enactivism** Mark-Oliver Casper,2018-11-19 Social enactivism is a philosophical theory which through the analysis of discursive practice aims at explaining how high level cognitive conditions and processes emerge The fundamental tenets of this theory are based on enactivist and neo pragmatist principles Therefore the emphasis is not on the purely linguistic understanding of discourse but on its structural interaction with technology that is created by man himself in the context of which the discursive performance takes place This perspective addresses not only a blind spot in the international debate about situated cognition but also a current problem in the philosophy of mind **Oxford Studies in Epistemology Volume 4** Tamar Szabó Gendler,John Hawthorne,2013-04-25 This work is a major biennial volume offering a regular snapshot of state of the art work in this important field of epistemology
