

Fail Safe

When your electric locking device is set to 'fail safe', it means that when the power is cut, your door will no longer be locked. This allows unprotected access from both inside and outside the door. In order to secure and lock your premises, a key holder must manually lock the door. Fail safe locking is often used in communal housing and commercial spaces where lots of people pass through the building daily.

Fail Secure

When your electric locking device is set to 'fail secure', it means that when the power is cut, your door will permanently lock and no electronic access device will work. In order to unlock the door a key holder must manually do so. Fail secure locking is often used for premises in which confidential information or high value items may be stored. Examples of these could be cash rooms and Home Office approved gun rooms.
