El-Aasser, 2012-12-06 It is particularly appropriate that this symposium on the emulsion polymerization of vinyl acetate was held in recognition of the industrial importance of poly vinyl acetate and vinyl acetate copolymers and their rather unique properties among emulsion polymers in general Poly vinyl acetate latexes were the first synthetic polymer latexes to be made on a commercial scale their production using polyvinyl alcohol as emulsifier began in Germany during the mid 1930s and has continued to the present day growing steadily with the years Indeed poly vinyl acetate latexes prepared with polyvinyl alcohol are still one of the mainstays of the adhesives industry With the passing of time however vinyl acetate copolymers have been developed copolymers with maleate esters such as dibutyl maleate acrylate esters such as ethyl acrylate and butyl acrylate versatic acid esters and more recently ethylene These versatile copolymers

have found increasing use in more sophisticated adhesives with specialized properties adhesives for clay coatings on paper carpet backing and interior and exterior paints Thus more than 45 years after the first commercial production of vinyl acetate latexes their use is still growing both in actual quantities and different applications The industrial importance of vinyl acetate latexes makes the mechanism and kinetics of their emulsion polymerization of practical as well as scientific interest

Emulsion Polymerisation and Latex Applications Christopher D. Anderson, Eric S. Daniels, 2003 The term latex covers emulsion polymers polymer dispersions and polymer colloids This review report provides a general overview of the emulsion polymerisation processes and explains how the resulting latices are used in industrial applications The classes of emulsion polymers are surveyed and the commercial technologies and potential future uses discussed An additional indexed section containing several hundred abstracts from the Polymer Library gives useful references for further reading
