Virus Taxonomy International Committee on Taxonomy of Viruses, Andrew MQ King, 2011-10-25 The practical need to partition the world of viruses into distinguishable universally agreed upon entities is the ultimate justification for developing a virus classification system Since 1971 the International Committee on Taxonomy of Viruses ICTV operating on behalf of the world community of virologists has taken on the task of developing a single universal taxonomic scheme for all viruses infecting animals vertebrate invertebrates and protozoa plants higher plants and algae fungi bacteria and archaea The current report builds on the accumulated taxonomic construction of the eight previous reports dating back to 1971 and records the proceedings of the Committee since publication of the last report in 2005 Representing the work of more than 500 virologists worldwide this report is the authoritative reference for virus organization distinction and structure **Virus Taxonomy** Andrew MQ King, Elliot Lefkowitz, Michael J. Virus Taxonomy ,2012 **Marburg- and Ebolaviruses** Elke Mühlberger, Lisa L. Hensley, Jonathan S. Towner, 2017-12-23 This volume provides an overview of recent advances in our understanding of the biology of marburg and ebolaviruses It focuses on four essential areas 1 ecology outbreaks and clinical management 2 disease pathogenesis and protection 3 virus replication inside the cell and 4 molecular tools for virus study and taxonomy For 50 years these viruses have spilled over sporadically and without warning from their wildlife reservoirs often causing major outbreaks and high fatalities The consequences can be devastating with a clear potential for global reach as demonstrated by the 2013 West African outbreak of Ebola virus which led to over 28 000 reported cases across three continents and more than 11 000 deaths Given the international threat posed by these viruses the pace and scope of basic research have also greatly intensified ranging from studies of virus emergence epidemiology antiviral countermeasures and human disease to detailed mechanistic studies of virus entry replication virion assembly and protein structure Written by internationally respected experts this book will appeal to a wide audience and be a valuable resource for basic researchers clinicians and advanced students alike

Encyclopedia of Virology ,2021-02-24 Encyclopedia of Virology Fourth Edition Five Volume Set builds on the solid

foundation laid by the previous editions expanding its reach with new and timely topics In five volumes the work provides comprehensive coverage of the whole virosphere making this a unique resource Content explores viruses present in the environment and the pathogenic viruses of humans animals plants and microorganisms Key areas and concepts concerning virus classification structure epidemiology pathogenesis diagnosis treatment and prevention are discussed guiding the reader through chapters that are presented at an accessible level and include further readings for those needing more specific information More than ever now with the Covid19 pandemic we are seeing the huge impact viruses have on our life and society This encyclopedia is a must have resource for scientists and practitioners and a great source of information for the wider public Offers students and researchers a one stop shop for information on virology not easily available elsewhere Fills a critical gap of information in a field that has seen significant progress in recent years Authored and edited by recognized experts in the field with a range of different expertise thus ensuring a high quality standard

Virus-Like Particles Paul Pumpens, Peter Pushko, 2022-05-22 This book represents the first complete and systematic guide to the virus like particles VLPs and their applications as vaccines therapeutic tools nanomaterials and nanodevices The grouping of the VLPs follows the most recent virus taxonomy and the traditional Baltimore classification of viruses which are based on the genome structure and mechanism of mRNA synthesis Within each of the seven Baltimore classes the order taxon serves as a framework of the chapter s arrangement The term VLP is used as a universal designation for the virus core or capsid like structures which became an important part of the modern molecular virology The 3D structures expression systems and nanotechnological applications are described for VLPs in the context of the original viruses and uncover their evolving potential as novel vaccines and medical interventions Key Features Presents the first full guide to the VLP nanotechnology classified by current viral taxonomy Outlines specific structural properties and interconnection of the virions and VLPs Explains generation and characteristics of VLPs produced by various expression systems Offers up to date summary of VLPs designed as vaccines and delivery tools Unveils interconnection of VLPs with novel organic and inorganic nanomaterials
