Microbiology is a comprehensive textbook that facilitates a thorough understanding of the scope, nature and complexity of the science of microscopic organisms. It gives a balanced presentation of foundational concepts, real world applications and current research and experimentation. The text approaches the subject within the context of exploration and experimentation, integrating a wealth of classroom tested pedagogical features. The material is organized around the three pillars of physiology, ecology and genetics, helping students appreciate the interconnected and dynamic nature of microbiology and explore the relationship between different types of microbes, other organisms and the environment. This international adaptation contains up to date coverage of topics including DNA replication and gene expression, viral pathogenesis, microbial biotechnology, adaptive immunity, the control of infectious diseases and the microbiology of food and water. It also offers integrated coverage of SARS CoV 2 and the impacts of COVID 19, relating it to the importance of an interdisciplinary response to a global pandemic. It also focuses on strengthening the organization of the content and updating the end of chapter problems.

Medical microbiology, virology and immunology T. V. Andrianova, V. V. Bobyr, V. V. Danyleichenko, 2019-01-01. The textbook was compiled in accordance with officially approved teaching programs for microbiology, virology and immunology in all faculties of higher medical schools. Questions of general microbiology, basic methods of studying microorganisms, morphology, structure and classification of bacteria, their physiology, the influence of physical, chemical and biological factors on microorganisms, microbial genetics and biotechnology, antimicrobials and the concept of infection and special microbiology, morphology, physiology, pathogenic properties of pathogens of many infectious diseases, modern methods of their diagnostics, specific prevention and therapy. The textbook also contains sections on virology, protozoology, mycology and helminthology which examine the basic biological properties of the causative agents and the diseases they cause. A significant part of the textbook is devoted to questions of immunology: nonspecific resistance of the organism, the doctrine of antigens, the immune system of the body, immune response, immunity, reactions, allergy and other types of immune responses, immunodiagnostics and immunocorrection, immunoprophylaxis and immunotherapy. The textbook contains sections on clinical and sanitary microbiology, examines the ecology of microorganisms, the normal microbiota of the human body and the effect of microorganisms on the fetus. Separate sections are devoted to the microbiota of the oral cavity and microbiological research in stomatological and pharmaceutical fields. The textbook is intended for students of medical
