Visual Basic 2005 Jumpstart Wei-Meng Lee, 2005-09-22 Okay all you VB6 developers time s up As of March 2005 Microsoft no longer supports this version of Visual Basic And you can t blame them Three years ago they introduced the NET Framework an elegant powerful platform along with the new component based VB NET language But roughly five million of you decided to stick with VB6 mostly to maintain legacy Windows and COM projects Now with the upcoming release of VB 2005 Microsoft has several attractive reasons to upgrade that you ll find hard to resist including the return of some VB6 features And we have the perfect book to help you make the conversion Visual Basic 2005 Jumpstart Now you can test drive the beta version of VB 2005 with three hands on projects that enable you to learn the syntax of this new language quickly VB 2005 not only lets you convert the bulk of your existing VB6 code but offers several familiar features such as compile and run debugging new MyClasses that simplify use of NET libraries and frameworks lots of IDE support for Windows web and mobile GUI development and data access controls that closely resemble what you use now The real plus is that you ll be using these features with the NET platform which is more secure less complex than COM and offers OneClick deployment Visual Basic 2005 Jumpstart lets you get the feel of this platform for building smart rich Windows Forms clients ASP NET web applications and web services Author Wei Meng Lee a Microsoft NET MVP veteran O Reilly author and frequent contributor to the O Reilly Network has put together three useful test drive projects complete with code samples that let you develop A personal library Windows application A Web based shopping cart application A stock enquiry Web Service Our jumpstart guide is the quick painless way to migrate from VB6 to VB 2005 and the perfect training manual for moving your organization to the more robust dynamic and secure world of NET Developing .NET Enterprise Applications John Kanalakakis, 2008-01-01 APPLICATION DEVELOPMENT IS USUALLY faced with several critical factors time to market ever increasing quality and cost of development Time to market is critical in that any project that an individual or company may have in mind is probably already in the works elsewhere When that is the case everything comes down to being the first to deliver even if it falls short A Gartner Research study showed that competing products offering similar features will take the most mar ket share if released sooner The study further added that the product released first even with fewer features typically builds market share faster The lesson of that study is that it is important to release a 1 0 version of a new product concept as quickly as possible and then follow up with feature add ons over time Product consistency and quality are also critical to the success of products making their debut Applications with modules that look differently can under mine the application user s confidence in the product The lower their confidence in the application the less they use the product and come to depend upon it The same can be said at the code level The more modules that are implemented con sistently the easier different developers can step in to investigate and resolve problems Cost of development is often measured by productivity or how much code is created to accomplish specific application tasks **ASP.NET Developer's JumpStart**
