Analysis of financial viability of Aquaponic Systems in the Ashanti region Georgette Boateng, 2023-10-31 Bachelor Thesis from the year 2021 in the subject Agrarian Studies Kwame Nkrumah University of Science and Technology Kwame Nkrumah University of Science and Technology course BSC Agribusiness language English abstract Increasing demand on

water resources reduced land water availability and concerns over food security have spurred the evolution of many innovative and complex food production systems. Aquaponics is known to be a productive, innovative and sustainable fish and vegetable production system that is revolutionizing agriculture in the face of drought, soil fertility losses and climate change. It is an advanced aquaculture system expected to improve food security in developing countries. However, as an emerging technology, there is very limited information on the system in Ghana. Questions about the financial viability, ecological and socio-economic sustainability of Aquaponics are answered in this comprehensive review. This study considers Aquaponics projects in Ashanti Region, looks at the technology, the type of fish and plant yields and juxtaposes the technology within best use practices to make recommendations that will inform evidence-based policymaking and highlights the system's contribution to improving food security in Ghana. This study assessed the financial viability of the Aquaponics system using data obtained from Aquaponics farmers in the Ashanti Region. The initial investment, revenues, benefits, cost ratio, BCR, net present value, NPV, using 5 years internal rate of return, IRR, payback period and accounting rate of return, ARR, were modelled to determine the financial viability of the Aquaponics system. The result indicated that Aquaponics system operation is financially viable. Two fish species, catfish and tilapia, were considered for this study due to consumers' preferences. The most pressing constraint in the study area is high feeding cost, followed by power fluctuation and high mortality rate, as the least constraint. This study serves as a model for promoting a viable and sustainable unconventional food production system to attain food security and local economic development in Ashanti Region.

A Review of the Energy Resources of the Public Lands Elmer W. Shaw, 1971 **Hart's E&P**, 2007-10 The Cottage Under the Big Pines Susan Southam, 2015-03-01

Susan Southam allows readers to look through the window of Foxgloves Spire, her former home of 30 years located in rural Australia and into the lushly romantic and soul-filled interior within. *The Cottage Under the Big Pines* tells the nostalgic love story between Southam and her restored century-old timber cottage in a collection of essay-like chapters themed around seasons and colours and supported by an abundance of photographs. Southam's writing is heartfelt, emotional and honest; her photographs capture the spirit of her home with its astonishingly beautiful garden as well as the details of her colour schemes, decoration and furnishings. *The Cottage Under the Big Pines* provides inspiration and information for readers to apply, but above all, it opens our eyes to the humble details of our immediate environment that enrich our everyday lives.

Skellings' Mining Review, 1966 California. Court of Appeal (1st Appellate District). Records and Briefs California (State)., Role of the Southern Ocean in Atmospheric pCO₂ Change: Observations, Simulations and Paleorecords Zhifang Xiong, Di Qi, Xu Zhang, Thomas Algeo, Jun Zhao, 2025-01-02

The Southern Ocean plays a key role in atmospheric CO₂ sequestration, accounting for 40-50% of the anthropogenic CO₂ absorbed by the modern ocean. The size of this sink is attributed to strong water mass sinking, i.e. mode intermediate water and bottom water formation, which transports carbon to the mid and deep ocean, thus isolating it from the atmosphere for centuries. The Southern Ocean also played a critical role in

atmospheric pCO₂ variations in the geologic past on both orbital and millennial timescales Moreover the Southern Ocean modulates atmospheric and oceanic circulation in the tropics remotely influencing low latitude atmospheric CO₂ exchange Thus the Southern Ocean is a key component of the global climate system whose operation must be better understood at a range of timescales in order to accurately assess its effects on atmospheric pCO₂ in the future This Research Topic will consist of a set of cutting edge investigations of the processes and mechanisms of Southern Ocean influence on atmospheric pCO₂ and global climate change
