Enlightening Symbols Joseph Mazur, 2014-03-23 An entertaining look at the origins of mathematical symbols While all of us regularly use basic math symbols such as those for plus minus and equals few of us know that many of these symbols weren t available before the sixteenth century What did mathematicians rely on for their work before then And how did mathematical notations evolve into what we know today In *Enlightening Symbols* popular math writer Joseph Mazur explains the fascinating history behind the development of our mathematical notation system He shows how symbols were used initially how one symbol replaced another over time and how written math was conveyed before and after symbols became widely adopted Traversing mathematical history and the foundations of numerals in different cultures Mazur looks at how

historians have disagreed over the origins of the numerical system for the past two centuries He follows the transfigurations of algebra from a rhetorical style to a symbolic one demonstrating that most algebra before the sixteenth century was written in prose or in verse employing the written names of numerals Mazur also investigates the subconscious and psychological effects that mathematical symbols have had on mathematical thought moods meaning communication and comprehension He considers how these symbols influence us through similarity association identity resemblance and repeated imagery how they lead to new ideas by subconscious associations how they make connections between experience and the unknown and how they contribute to the communication of basic mathematics From words to abbreviations to symbols this book shows how math evolved to the familiar forms we use today

Integral Biomathics Plamen L. Simeonov, Leslie S. Smith, Andrée C. Ehresmann, 2012-07-13 Perhaps the most distinct question in science throughout the ages has been the one of perceivable reality treated both in physics and philosophy Reality is acting upon us and we and life in general are acting upon reality Potentiality found both in quantum reality and in the activity of life plays a key role In quantum reality observation turns potentiality into reality Again life computes possibilities in various ways based on past actions and acts on the basis of these computations This book is about a new approach to biology and physics of course Its subtitle suggests a perpetual movement and interplay between two elusive aspects of modern science reality matter and potentiality mind between physics and biology both captured and triggered by mathematics to understand and explain emergence development and life all the way up to consciousness But what is the real potential difference between living and non living matter How does time in potentiality differ from time in reality What we need to understand these differences is an integrative approach This book contemplates how to encircle life to obtain a formal system equivalent to the ones in physics Integral Biomathics attempts to explore the interplay between reality and potentiality

Modern Humans John F.

Hoffecker, 2017-10-31 *Modern Humans* is a vivid account of the most recent and perhaps the most important phase of human evolution: the appearance of anatomically modern people *Homo sapiens* in Africa less than half a million years ago and their later spread throughout the world. Leaving no stone unturned, John F. Hoffecker demonstrates that *Homo sapiens* represents a major transition in the evolution of living systems in terms of fundamental changes in the role of non-genetic information. *Modern Humans* synthesizes recent findings from genetics, including the rapidly growing body of ancient DNA, the human fossil record, and archaeology relating to the African origin and global dispersal of anatomically modern people. Hoffecker places humans in the broad context of the evolution of life, emphasizing the critical role of genetic and non-genetic forms of information in living systems as well as how changes in the storage, transmission, and translation of information underlie major transitions in evolution. He also draws on information and complexity theory to explain the emergence of *Homo sapiens* in Africa several hundred thousand years ago and the rapid and unprecedented spread of our species into a variety of environments in Australia and Eurasia, including the Arctic and Beringia, beginning between 75,000 and 60,000 years ago. This magisterial work will appeal to all with an interest in the ever-fascinating field of human evolution.
