practices are used and embedded within individual disciplines they are often developed in isolation. However, they address recurring problems common to all disciplines. The editors of this book tackled the challenge by recruiting key representatives from several communities, harmonizing the different perspectives derived from individual backgrounds and lining them up with the book's vision. The result is a collection of M/S systems engineering examples that offer an initial means for cross-domain capitalization of the knowledge, methodologies, and technologies developed in several communities. These examples provide the pros and cons of the methods and techniques, available lessons learned, and pitfalls to avoid. As our society moves further in the information era, knowledge and M/S capabilities become key enablers for the engineering of complex systems and systems of systems. Therefore, knowledge and M/S methodologies and technologies become valuable output in an engineering activity, and their cross-domain capitalization is key to further advance the future practices in systems engineering. This book collates information across disciplines to provide you with the tools to more efficiently design and manage complex systems that achieve their goals.

Retail Supply Chain Management James B. Ayers, Mary Ann Odegaard, 2007-11-26. A consequence of business specialization is the implementation of weak processes that cross departmental and corporate boundaries. Supply chain management (SCM) addresses this issue by requiring a process view that reaches across these confines. Due to globalization and a competitive environment, those within the retail supply chains are particular.
