Wissenschaft Kunst Modellierung Philosophische Philosophical:

Wissenschaft und Kunst der Modellierung Bernhard Thalheim, Ivor Nissen, 2015-07-01 Models are one of the main instruments in scientific research Disciplines have developed a different understanding of the notion function and purpose of models We thus need a systematic approach in order to understand to build and to use models This book gives an insight into the disciplinary modelling know how and is a starting point to develop a general model approach that generalises and combines for an interdisciplinary use *Leveraging Applications of Formal Methods, Verification and Validation. Modeling* Tiziana Margaria, Bernhard Steffen, 2018-10-28 The four volume set LNCS 11244 11245 11246 and 11247 constitutes the refereed proceedings of the 8th International Symposium on Leveraging Applications of Formal Methods Verification and Validation ISOFA 2018 held in Limassol Cyprus in October November 2018 The papers presented were carefully reviewed and selected for inclusion in the proceedings Each volume focusses on an individual topic with topical section headings within the volume Part I Modeling Towards a unified view of modeling and programming X by construction STRESS 2018 Part II Verification A broader view on verification from static to runtime and back evaluating tools for software verification statistical model checking RERS 2018 doctoral symposium Part III Distributed Systems rigorous engineering of collective adaptive systems verification and validation of distributed systems and cyber physical systems engineering Part IV Industrial Practice runtime verification from the theory to the industry practice formal methods in industrial practice bridging the gap reliable smart contracts state of the art applications challenges and future directions and industrial day **Advances in Conceptual Modeling** Claudenir M. Fonseca, *Modelling Human Behaviour in Landscapes* Oliver Nakoinz, Daniel Knitter, 2016-04-08 This volume is designed as a 12 lecture textbook which can serve as a course companion self teaching guide and handbook for basic concepts Each lecture comprises 20 pages in which the methods are introduced examples shown and the code is given All examples are computed with open source software mainly R and with archaeological data available from the book s website The book does not describe elaborated high end models but rather very basic modelling concepts that serve as components in more complex models The book enables the reader to construct such models by themselves and be sensitive for certain problems In addition it gives hints for the interpretation of the results Students are usually quick to apply fancy methods yet fail in the proper interpretation due to a lack of understanding of the underlying principles This problem is addressed by the proposed book through three concepts 1 Command line software forces the students to first learn some details before they are able to produce results on their own 2 The book is focused on principles and methods When the students understand a few basic principles they have far better access to a wide range of related methods 3 Examples of poor analysis highlight common pitfalls The volume attempts to be an applied minimalistic and efficient textbook and is based upon several successful courses Digital Scholarly Editions Beyond Text Tessa Gengnagel, 2024-02-07 Scholarly editions contextualize our cultural heritage Traditionally methodologies from the field of

scholarly editing are applied to works of literature e.g. in order to trace their genesis or present their varied history of transmission. What do we make of the variance in other types of cultural heritage? How can we describe, record and reproduce it systematically? From medieval to modern times, from image to audiovisual media, the book traces discourses across different disciplines in order to develop a conceptual model for scholarly editions on a broader scale. By doing so, it also delves into the theory and philosophy of the digital humanities as such.

Information Modelling and Knowledge Bases XXXIII

Marina Tropmann-Frick, Hannu Jaakkola, Bernhard Thalheim, Yasushi Kiyoki, Naofumi Yoshida, 2022-02-15. The technology of information modelling and knowledge bases addresses the complexities of modelling in digital transformation and digital innovation, reaching beyond the traditional borders of information systems and academic research in computer science. This book presents 21 papers from the 31st International conference on Information Modeling and Knowledge Bases (EJC 2021), hosted by the Department of Informatics of the University of Applied Sciences in Hamburg, Germany, and held as a virtual event from 7 to 9 September 2021 due to restrictions caused by the Corona virus. The conference provides a research forum for academics and practitioners dealing with information and knowledge to exchange scientific results and experiences. EJC 2021 covered a wide range of themes, extending knowledge discovery through conceptual modeling, knowledge and information modeling and discovery, linguistic modeling, cross-cultural communication and social computing, environmental modeling and engineering, and multimedia data modeling and systems. As always, the conference was open to new topics related to its main themes, meaning the content emphasis of the EJC conferences is always able to adapt to the changes taking place in the research field. The 21 papers included here, after rigorous review, selection and upgrading, are the result of presentations, comments and discussions during the conference. Providing an up-to-the-minute overview of the technology of information modeling and knowledge bases, the book will be of interest to all those working in the field.

Mathematische Modellierung bei Platon zwischen Thales und Euklid Claas Lattmann, 2019-03-18 Wissenschaftliche Mathematik ist eine der wichtigsten Kulturleistungen des antiken Griechenland Doch wann und wo genau hatte sie ihren Ursprung Die Einschätzung der Antike zwischen Thales und Euklid habe Platon eine maßgebliche Rolle gespielt gilt als Fiktion Diese Studie wirft einen neuen modelltheoretischen Blick auf die Zeugnisse und erweist im Gegenteil dass in der Tat Platon als Schöpfer von axiomatisch deduktiver Mathematik gelten muss Grundlage der Analyse ist eine Neubewertung des Diagramms als zentralen Charakteristikums griechischer Mathematik aus modelltheoretischer Perspektive Eine Untersuchung der Quadratverdopplung im Menon und zur Wurfelverdopplung Delisches Problem zeigt dass eine theoretische Mathematik erstmals für Platon bezeugt ist Dass weiter auch nur Platon ein Motiv hatte sie zu erfinden ergibt sich aus der Explikation von Platons Theorie der mathematischen Modellierung anhand des Liniengleichnisses in Verbindung mit dem Nachweis dass der Timaios als deren praktische Umsetzung fungiert Die Studie bietet wissenschaftshistorisch neue Einsichten zur Entstehung von Mathematik philosophiehistorisch zu Platons Ontologie und Epistemologie und modelltheoretisch zu Theorie und Praxis von Modellierung
