Self-Organizing Nanovectors for Drug Delivery Giuseppe De Rosa, Pietro Matricardi, 2020-04-17 Nanomedicine represents one of the most investigated areas in the last two decades in the field of pharmaceuticals Several nanovectors have been developed and a growing number of products have been approved It is well known that many biomaterials are able to self organize under controlled conditions giving rise nanostructures Polymers lipids inorganic materials peptides and proteins and surfactants are examples of such biomaterials and the self assembling property can be exploited to design nanovectors that are useful for drug delivery The self organization of nanostructures is an attractive approach to preparing nanovectors avoiding complex and high energy consuming preparation methods and in some cases facilitating drug loading procedures Moreover preparations based on these biocompatible and pharmaceutical grade biomaterials allow an easy transfer from the lab to the industrial scale This book reports ten different works and a review aiming to cover multiple strategies and pharmaceutical applications in the field of self organizing nanovectors for drug delivery

Computational Solutions for Knowledge, Art, and Entertainment: Information Exchange Beyond Text Ursyn, Anna, 2013-10-31 As interactive application software such as apps installations and multimedia presentations have become pervasive in everyday life more and more computer scientists engineers and technology experts acknowledge the influence that exists beyond visual explanations Computational Solutions for Knowledge Art and Entertainment Information Exchange Beyond Text focuses on the methods of depicting knowledge based concepts in order to assert power beyond a visual explanation of scientific and computational notions This book combines formal descriptions with graphical presentations and encourages readers to interact by creating visual solutions for science related concepts and presenting data This reference is essential for researchers computer scientists and academics focusing on the integration of science technology computing art and mathematics for visual problem solving

Intracellular Delivery III Aleš Prokop, Volkmar Weissig, 2016-10-31 A critical review is attempted to assess the status of nanomedicine entry onto the market The emergence of new potential therapeutic entities such as DNA and RNA fragments requires that these new drugs will need to be delivered in a cell and organelle specific manner Although efforts have been made over the last 50 years or so to develop such delivery technology no effective and above all clinically approved protocol for cell specific drug delivery in humans exists as yet Various particles macromolecules liposomes and most recently nanomaterials have been said to show promise but none of these promises have so far been reduced to human clinical practice The focus of this volume is on cancer indication since the majority of published research relates to this application within that we focus on solid tumors solid malignancies Our aim is critically to evaluate whether nanomaterials both non targeted and targeted to specific cells could be of therapeutic benefit in clinical practice The emphasis of this volume will be on pharmacokinetics PK and pharmacodynamics PD in animal and human studies Apart from the case of exquisitely specific antibody based drugs the development of target specific drug carrier delivery systems has not yet been broadly successful at the clinical level It can be argued that drugs generated using the conventional means of drug development i e relying on facile biodistribution and activity after preferably oral administration are not suitable for a target specific delivery and would not benefit from such

delivery even when a seemingly perfect delivery system is available Therefore successful development of site selective drug delivery systems will need to include not only the development of suitable carriers but also the development of drug entities that meet the required PK PD profile
