practices in the United States and selected foreign countries The synthesis is a collection of information on formal inspection  
practices of departments of transportation DOTs These are primarily visual inspections and they provide data to bridge  
registries and databases For U S inspection practices this synthesis reports on inspection personnel inspection types and  
inspection quality control and quality assurance Staff titles and functions in inspection programs are reported together with  
qualifications and training of personnel formation of inspection teams and assignment of teams to bridges Inspection types  
are described in terms of their scope methods and intervals Quality control and quality assurance programs are reviewed in  
terms of the procedures employed staff involved quality measurements obtained and the use of quality findings in DOT

inspection programs Foreign practices are presented in the same organization of inspection personnel types and quality programs Comparisons of U S and foreign inspection practices are included Information was obtained from a questionnaire sent to U S state transportation departments similar questionnaires modified individually for transportation agencies in selected foreign countries and formal documents used by transportation departments and agencies These documents primarily included bridge inspection manuals inspection training manuals and technical memoranda but also included blank forms for inspections DOTs job descriptions for inspectors and descriptions of inspection training courses Overall this synthesis includes information from forty U S state transportation departments and from roads agencies in eight foreign nations Denmark France Finland Germany Norway South Africa Sweden and the United Kingdom The synthesis also includes in an appendix information from a few provincial and municipal transport agencies in Canada

*Image-Based Damage Assessment for Underwater Inspections* Michael O'Byrne,Bidisha Ghosh,Franck Schoefs,Vikram Pakrashi,2018-07-18

Inspection is crucial to the management of ageing infrastructure Visual information on structures is regularly collected but very little work exists on its organised and quantitative analysis even though image processing can significantly enhance these inspection processes and transfer real financial and safety benefits to the managers owners and users Additionally new opportunities exist in the fast evolving sectors of wind and wave energy to add value to image based inspection techniques This book is a first for structural engineers and inspectors who wish to harness the full potential of cameras as an inspection tool It is particularly directed to the inspection of offshore and marine structures and the application of image based methods in underwater inspections It outlines a set of best practice guidelines for obtaining imagery then the fundamentals of image processing are covered along with several image processing techniques which can be used to assess multiple damage forms crack detection corrosion detection and depth analysis of marine growth on offshore structures The book provides benchmark performance measures for these techniques under various visibility conditions using an image repository which will help inspectors to envisage the effectiveness of the techniques when applied MATLAB scripts and access to the underwater image repository are included so readers can run these techniques themselves Practising engineers and managers of infrastructure assets are guided in image processing based inspection Researchers can use this book as a primer and it also suits advanced graduate courses in infrastructure management or on applied image processing
