Object-Oriented Analysis and Design Using UML MATHA, MAHESH P.,2008-04-09 A modern computer program such as the one that controls a rocket's journey to moon is like a medieval cathedral vast complex layered with circuits and mazes To write such a program which probably runs into a hundred thousand lines or more knowledge of an object oriented language like Java or C is not enough Unified Modelling Language UML elaborated in detail in this book is a methodology that assists in the design of software systems The first task in the making of a software product is to gather requirements from the client This well organized and clearly presented text develops a formal method to write down these requirements as Use Cases in UML Besides it also develops the concepts of static and dynamic modelling and the Unified Process that suggests incremental and iterative development of software taking client feedback at every step The concept of Design Patterns which provide solutions to problems that occur repeatedly during software development is discussed in detail in the concluding chapters Two appendices provide solutions to two real life problems Case Studies mapping of examples into Java code that are executable on computers summary and Review Questions at the end of every chapter make the book reader friendly The book will prove extremely useful to undergraduate and postgraduate students of Computer Science and Engineering Information Technology and Master of Computer Applications MCA It will also benefit professionals who wish to sharpen their programming skills using UML *Encyclopedia of Information Science and Technology* Mehdi

characterization of EuroSPI is reflected in a statement made by a company the biggest value of EuroSPI lies in its function as a European knowledge and experience exchange mechanism for SPI and innovation Since its beginning in 1994 in Dublin the EuroSPI initiative has outlined that there is not a single silver bullet to solve SPI issues but that you need to understand a combination of different SPI methods and approaches to achieve concrete benefits The fore each proceedings volume covers a

variety of different topics and at the conference we discuss potential synergies and the combined use of such methods and approaches. These proceedings contain selected research papers for five topics: Section I SPI Tools, Section II SPI Methods, Section III SPI in SMEs, Section IV Economic Aspects of SPI, and Section V The Future of SPI. Section I presents studies on SPI tools. The authors provide an insight into new tools which can be used for SPI. Willem Bekkers et al. present a new assessment method and tool for software product management. Ismael Edrei Espinosa Curiel et al. illustrate a graphical approach to support the teaching of SPI. Business Process Management Matthias Weske, 2019-06-22. Business process management is usually treated from two different perspectives: business administration and computer science. While business administration professionals tend to consider information technology as a subordinate aspect in business process management for experts to handle, by contrast, computer science professionals often consider business goals and organizational regulations as terms that do not deserve much thought but require the appropriate level of abstraction. Matthias Weske argues that all communities involved need to have a common understanding of the different aspects of business process management. To this end, he details the complete business process lifecycle from the modeling phase to process enactment and improvement, taking into account all different stakeholders involved. After starting with a presentation of general foundations and abstraction models, he explains concepts like process orchestrations and choreographies, as well as process properties and data dependencies. Finally, he presents both traditional and advanced business process management architectures, covering for example workflow management systems, service-oriented architectures, and data-driven approaches. In addition, he shows how standards like WfMC, SOAP, WSDL, and BPEL fit into the picture. This textbook is ideally suited for classes on business process management, information systems architecture, and workflow management. This 3rd edition contains a new chapter on business decision modelling, covering the Decision Model and Notation (DMN) standard. The chapter on process choreographies has been streamlined, and numerous clarifications have been fetched throughout the book. The accompanying website www.bpm-book.com contains further information and additional teaching material.
