International Handbook of Occupational Therapy Interventions Ingrid Söderback, 2014-11-25. Advanced therapies and technologies, new service delivery methods and care upgrades in underserved areas are translating into improved quality of life for millions with disabilities. Occupational therapy parallels this progress at the individual level, balancing short-term recovery and adaptation with long-term independence and well-being. This Second Edition of the International Handbook of Occupational Therapy Interventions builds on its groundbreaking predecessor by modelling current clinical standards rooted in scientific evidence-based practice. Its interventions are applied to a diverse range of client disabilities with many new or rewritten chapters on workplace and vehicle accommodations, smart home technologies, end-of-life planning and other salient topics. New introductory chapters spotlight core competencies in the field from assessing client needs and choosing appropriate interventions to evaluating programs and weighing priorities. And for increased educational value, interactive case studies allow readers an extra avenue for honing clinical reasoning and decision-making skills. Of particular note is a new chapter providing a taxonomy, the Occupational Therapy Intervention Framework, and a validation study of its categories and concepts delineating the occupational therapist's roles and the expected outcomes. Intervention areas featured in the Handbook include Adaptive interventions (OTs manage and facilitate clients' adaptations), Learning interventions (OTs teach and the clients learn or relearn), Enabling interventions (OTs enable clients to be meaningfully occupied), Preventing interventions (OTs prevent ill health and promote clients' ability to sustain health in daily life). The Second Edition of the International Handbook of Occupational Therapy Interventions is career-affirming reading for all members of rehabilitation teams including occupational and physical therapists and rehabilitation nurses. Students intending to enter this growing field and professionals working toward its continued improvement will find it useful and inspiring.

Computational Science and Its Applications - ICCSA 2020 Osvaldo Gervasi, Beniamino Murgante, Sanjay Misra, Chiara Garau, Ivan Blečić, David Taniar, Bernady O. Apduhan, Ana Maria A. C. Rocha, Eufemia Tarantino, Carmelo Maria Torre, Yeliz Karaca, 2020-10-02. The seven volumes LNCS 12249-12255 constitute the refereed proceedings of the 20th International Conference on Computational Science and Its Applications (ICCSA 2020) held in Cagliari, Italy, in July 2020. Due to the COVID-19 pandemic, the conference was organized in an online event. Computational Science is the main pillar of most of the present research, industrial and commercial applications, and plays a unique role in exploiting ICT innovative technologies. The 466 full papers and 32 short papers presented were carefully reviewed and selected from 1450 submissions. Apart from the general track, ICCSA 2020 also includes 52 workshops in various areas of computational sciences, ranging from computational science technologies to specific areas of computational sciences such as software engineering, security, machine learning, and artificial intelligence, blockchain technologies, and of applications in many fields.

Universal Design 2021: From Special to

Mainstream Solutions Ira Verma, 2021-07-15 Universal Design is a process for creating an equitable and sustainable society. It is a concept committed to recognizing and accepting each individual's potential and characteristics and promoting the realization of a built environment that does not stigmatize users but enables everyone to participate fully in their community. This book presents 32 articles from the 5th International Conference on Universal Design UD2021. Previous Universal Design conferences have been organized biennially but the 2020 conference was postponed due to COVID 19 restrictions and eventually held online from 9-11 June 2021. UD2021 brings together a multidisciplinary group of experts from around the world to share knowledge and best practice with the common goal of shaping the way we design, avoiding stereotyped or discriminatory views and solutions that could stigmatize particular groups of people. The articles are organized into chapters under seven broad themes: universal design and inclusive design; user experience and co-design; access to education and learning environment; web accessibility and usability of technology; architecture and the built environment; mobility and transport; and designing for older people. The current situation has highlighted not only the importance of web accessibility, the user-friendliness of interfaces and remote connections during the last year, the importance and quality of our daily living environment, access to services and green space has also become ever more obvious. This book will be of particular interest to those working to enable all those with disabilities or impairments to live independently and participate fully in all aspects of life.
