how economic and social reform could transform existing society into one in which the majority of the population as opposed to a small elite could find fulfillment Hobson attacked conventional economic wisdom which made a division between the cost of production and the utility derived from consumption Far from being necessarily arduous Hobson argued that work had the potential to bring about immense utility and enrichment The qualitative humanist work argues in favour of a new form of capitalism to minimise cost and maximise utility

Man and the Social Sciences (Routledge Revivals) William Alexander Robson, 2014-02-04 One of the most significant movements in the world of learning in the twentieth century was the rise and development of the social sciences However few attempts have been made to see how far social scientists have travelled on the road to studying and understanding human society First published in 1972 the lectures reprinted in this book aim to trace the development of the social sciences during the twentieth century and to show the role of the London School of Economics and Political Science in this development since it was founded in 1895 Each of the very distinguished lecturers was asked to take the larger view to be critical where necessary to treat his subject in the context of the world of learning The result is a survey of exceptional interest in which the growth of the social sciences is analysed from a number of

contrasting viewpoints each of which ranges widely and often with provocative brilliance over themes that are of general concern The introduction by Professor W A Robson which was not part of the original lecture series is in itself a critical assessment of the field that will be read with close attention
