Xml Retrieval Mounia Lalmas:

XML Retrieval Mounia Lalmas, 2009 Documents usually have a content and a structure The content refers to the text of the document whereas the structure refers to how a document is logically organized An increasingly common way to encode the structure is through the use of a mark up language Nowadays the most widely used mark up language for representing structure is the eXtensible Mark up Language XML XML can be used to provide a focused access to documents i.e. returning XML elements such as sections and paragraphs instead of whole documents in response to a query Such focused strategies are of particular benefit for information repositories containing long documents or documents covering a wide variety of topics where users are directed to the most relevant content within a document The increased adoption of XML to represent a document structure requires the development of tools to effectively access documents marked up in XML This book provides a detailed description of query languages indexing strategies ranking algorithms presentation scenarios developed to access XML documents Major advances in XML retrieval were seen from 2002 as a result of INEX the Initiative for Evaluation of XML Retrieval INEX also described in this book provided test sets for evaluating XML retrieval effectiveness Many of the developments and results described in this book were investigated within INEX Table of Contents Introduction Basic XML Concepts Historical Perspectives Query Languages Indexing Strategies Ranking Strategies Presentation strategies Evaluating XML Retrieval Effectiveness Conclusions **Comparative Evaluation of XML Information**
