

Understanding Prostate Cancer

What is the prostate?

The prostate is a small, walnut-shaped gland in men that produces and stores semen. It is located below the bladder and in front of the rectum. The prostate is made up of several lobes, and its size can vary from about the size of a walnut to the size of a grapefruit.

How does prostate cancer develop?

Prostate cancer develops when cells in the prostate gland start to grow out of control. These cells can form a tumor that can grow larger and spread to other parts of the body. The most common type of prostate cancer is adenocarcinoma, which starts in the glandular cells of the prostate.

Prostate cancer can be found in the prostate gland, the seminal vesicles, the vas deferens, and the ureters. It can also spread to the lymph nodes, the bones, and other parts of the body.

Prostate cancer is often found in the prostate gland, but it can also spread to other parts of the body. The most common way for prostate cancer to spread is through the lymph system. It can also spread through the blood to the bones and other parts of the body.

Prostate cancer can spread to the lymph nodes, which are part of the body's immune system. The lymph nodes are located throughout the body, and they help to filter out harmful substances from the blood.

Prostate cancer can spread to the bones, which are part of the body's support structure. The bones are made up of a hard material called bone, and they help to hold the body together.

Prostate cancer can spread to the lungs, which are part of the body's respiratory system. The lungs are located in the chest, and they help to filter out harmful substances from the air.

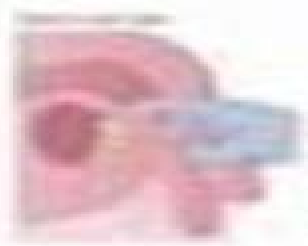

Prostate cancer can spread to the liver, which is part of the body's digestive system. The liver is located in the upper right part of the abdomen, and it helps to filter out harmful substances from the blood.

Prostate cancer can spread to the brain, which is part of the body's nervous system. The brain is located in the head, and it helps to control the body's movements and thoughts.

Prostate cancer is often found in the prostate gland, but it can also spread to other parts of the body. The most common way for prostate cancer to spread is through the lymph system. It can also spread through the blood to the bones and other parts of the body.
