However is this the most effective way of ensuring that corporations act responsibly and adhere to good corporate governance principles Have these Codes really improved corporate governance practices significantly Is it time for a rethink and at least in certain areas start to rely more on hard law and clearer expectations to ensure compliance All these issues are addressed in the book **New Technologies in Cancer Diagnostics and Therapeutics** Dong-Hua Yang, Pascale Cohen, Haichang Li, Yingyan Yu, 2021-10-21

Construction Methods, 1958 *Development of Extinction Imagers for the Determination of Atmospheric Optical Extinction* Atmospheric Optics Group, Janet E. Shields, Monette E. Karr, Vincent W. Mikuls, Paul J. Berger, Paul A. Frederickson, Richard J. Lind, William S. Hodgkiss, 2014 The primary goals of this project for JTO and ONR Grant N00014 07 1 1060 were to further develop Extinction Imagers for use in the ocean environment and to extend the capabilities into the Short Wave IR SWIR Extinction Imaging is a method for determining the effective extinction coefficient over an extended path using a sensor at one end of the path It uses calibrated imagers to acquire the relative radiance of a dark target near the other the end of the path and the horizon sky in the direction of the dark target It is completely passive and thus covert and the hardware is robust and relatively inexpensive It uses rigorous equations which determine the extinction coefficient from the measured apparent contrast of the radiance of the dark target with respect to the horizon sky The project was very successful We found that the ocean surface could readily be used as a dark target in red and SWIR wavelengths Both the red and the SWIR measurement results were excellent for daytime Comparisons with standard instruments as well as uncertainty analysis indicated that extinction imagers provide better measurements of the atmospheric extinction losses over extended paths than other methods of which we are aware Our secondary goals were to address the night regime and to address slanted paths above the horizontal Regarding night we found that the visible sensor acquired excellent data but the ocean surface was not a good dark target in our wavelengths Recommendations on the handling of night are given in the report Regarding the lines of sight above the horizon we developed a slant path algorithm that determines beam transmittance It performed very well Recommendations are made regarding integration of these techniques for military applications
