Author Catalog National Library of Medicine (U.S.),1955 Vols for 1951 53 include Authors and Subjects **Structure Determination by X-ray Crystallography** Mark Ladd,Rex Palmer,2014-07-08 The advances in and applications of x ray and neutron crystallography form the essence of this new edition of this classic textbook while maintaining the overall plan of the book that has been well received in the academic community since the first edition in 1977 X ray crystallography is a universal tool for studying molecular structure and the complementary nature of neutron diffraction crystallography permits the location of atomic species in crystals which are not easily revealed by X ray techniques alone such as hydrogen atoms or other light atoms in the presence of heavier atoms Thus a chapter discussing the practice of neutron diffraction techniques with examples broadens the scope of the text in a highly desirable way As with previous editions the book contains problems to illustrate the work of each chapter and detailed solutions are provided Mathematical procedures related to the material of the main body of the book are not discussed in detail but are quoted where needed with references to standard mathematical texts To address the computational aspect of crystallography the suite of computer programs from the fourth edition has been revised and expanded The programs enable the reader to participate fully in many of the aspects of x ray crystallography discussed in the book In particular the program system XRAY is interactive and enables the reader to follow through at the monitor screen the computational techniques involved in single crystal structure determination albeit in two dimensions with the data sets provided Exercises for students can be found in the book and solutions are available to instructors
