Understanding Mineral Deposits Understanding Mineral Deposits:

Understanding Mineral Deposits Kula Misra, 2000 Mineral deposits have supplied useful or valuable material for human consumption long before they became objects of scientific curiosity or commercial exploitation. In fact, the earliest human interest in rocks was probably because of the easily accessible useful e.g. red pigment in the form of earthy hematite or valuable e.g. native gold and gemstones materials they contained at places. In modern times, the study of mineral deposits has evolved into an applied science employing detailed field observations, sophisticated laboratory techniques for additional information, and computer modeling to build complex hypotheses. Understanding concepts that would someday help geologists to find new mineral deposits or exploit the known ones more efficiently have always been and will continue to be at the core of any course on mineral deposits, but it is a fascinating subject in its own right even for students who do not intend to be professional economic geologists. I believe that a course on mineral deposits should be designed as a capstone course that illustrates a comprehensive application of concepts from many other disciplines in geology: mineralogy, stratigraphy, and sedimentation, structure and tectonics, petrology, geochemistry, paleontology, geomorphology, etc. This book is intended as a text for such an introductory course in economic geology, primarily for senior undergraduate and graduate students in colleges and universities. It should also serve as a useful information resource for professional economic geologists.

Metallogenic Mechanism of the Galinge Polymetallic Iron Skarn Deposit, Qiman Tagh Mountains, Qinghai Province Miao Yu, 2019-02-15 This thesis summarizes the metallogenetic mechanism of the Galinge skarn deposit based on integrated knowledge of tectonics, geochemistry, geochronology, petrology, mineralogy, thermodynamics, and hydrothermal fluids. It also discusses the multistage growth characteristics of various skarn minerals in which the varying compositions reflect the evolution of the hydrothermal fluid. The multidisciplinary nature of this research sheds new light on reconstructing metallogenetic processes successfully. It outlines the main aspects of skarn zonation based on the dominant contents of the skarn minerals and the wall rock compositions. In addition, it focuses on volatile-rich minerals including tourmaline and hastingsite, highlighting the importance of the volatile component in the skarn deposit. Lastly, it describes the regional tectonic-magmatic evolutionary history to explain the metallogenic principles which can be used to guide prospecting in the field.

Mineral Deposits and Occurrences in the Arabian-Nubian Shield Ahmed Hassan Ahmed, 2022-03-18 This book presents a detailed review of the mineral deposits and occurrences in the Arabian Nubian Shield (ANS) including their distribution, mineralization styles, economic importance, and geological controls on the mineralization. The purpose of the book is to compile the results of past and recent investigations on mineral deposits and occurrences in the ANS, covering the countries of Saudi Arabia, Yemen, Egypt, Sudan, Eritrea, and Ethiopia. In this regard, it discusses in detail the various genetic mineralization styles in the ANS, including: 1) magmatic mineral deposits associated with mafic-ultramafic rocks, e.g. chromite, Ni, Cu, Co, PGE, magmatic sulfides, Fe, Ti, V oxides; 2) intrusion-related magmatic-hydrothermal deposits associated with felsic to
